

# ***Industry View of SDR and CR***

Rick Taylor  
Harris Corporation  
30 Nov 2010

# Key Points of This Presentation

- **SDR for Public Safety (PS)....**

- is not a “magic bullet”, just a collection of technologies
- continues to enable advancements in radios’ capabilities in a way that makes sense from **SWaP-C tradeoffs**
- since the last PS Workshop SDR’06, has made **multiband radios** a reality
- is far from passé yet; **multi-service, multi-bandwidth radios are next** in the industry

- **CR for Public Safety....**

- is really **nothing mysterious**, just automation of smart decisions
- **is used in manufacturers’ radios today** (e.g., trunking, roaming), but...
- more CR capabilities should continue to be implemented for PS, but in a “baby **step**” fashion

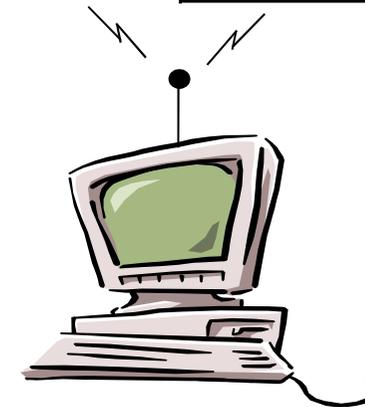

**Bottom Line-** SDR and CR for PS are *Evolutionary, not Revolutionary*, exist in Public Safety systems and radios today, and will continue to evolve to enable further advancements in capabilities

# ***Definitions from Wireless Innovation Forum Website***

---

- **SDR-** “Radio in which some or all of the **physical layer functions are software defined**”
  
- **Cognitive Radio-** “...radio in which communication systems are **aware of their internal state and environment...** (and) can **make decisions about their radio operating behavior by mapping that information against predefined objectives.**”

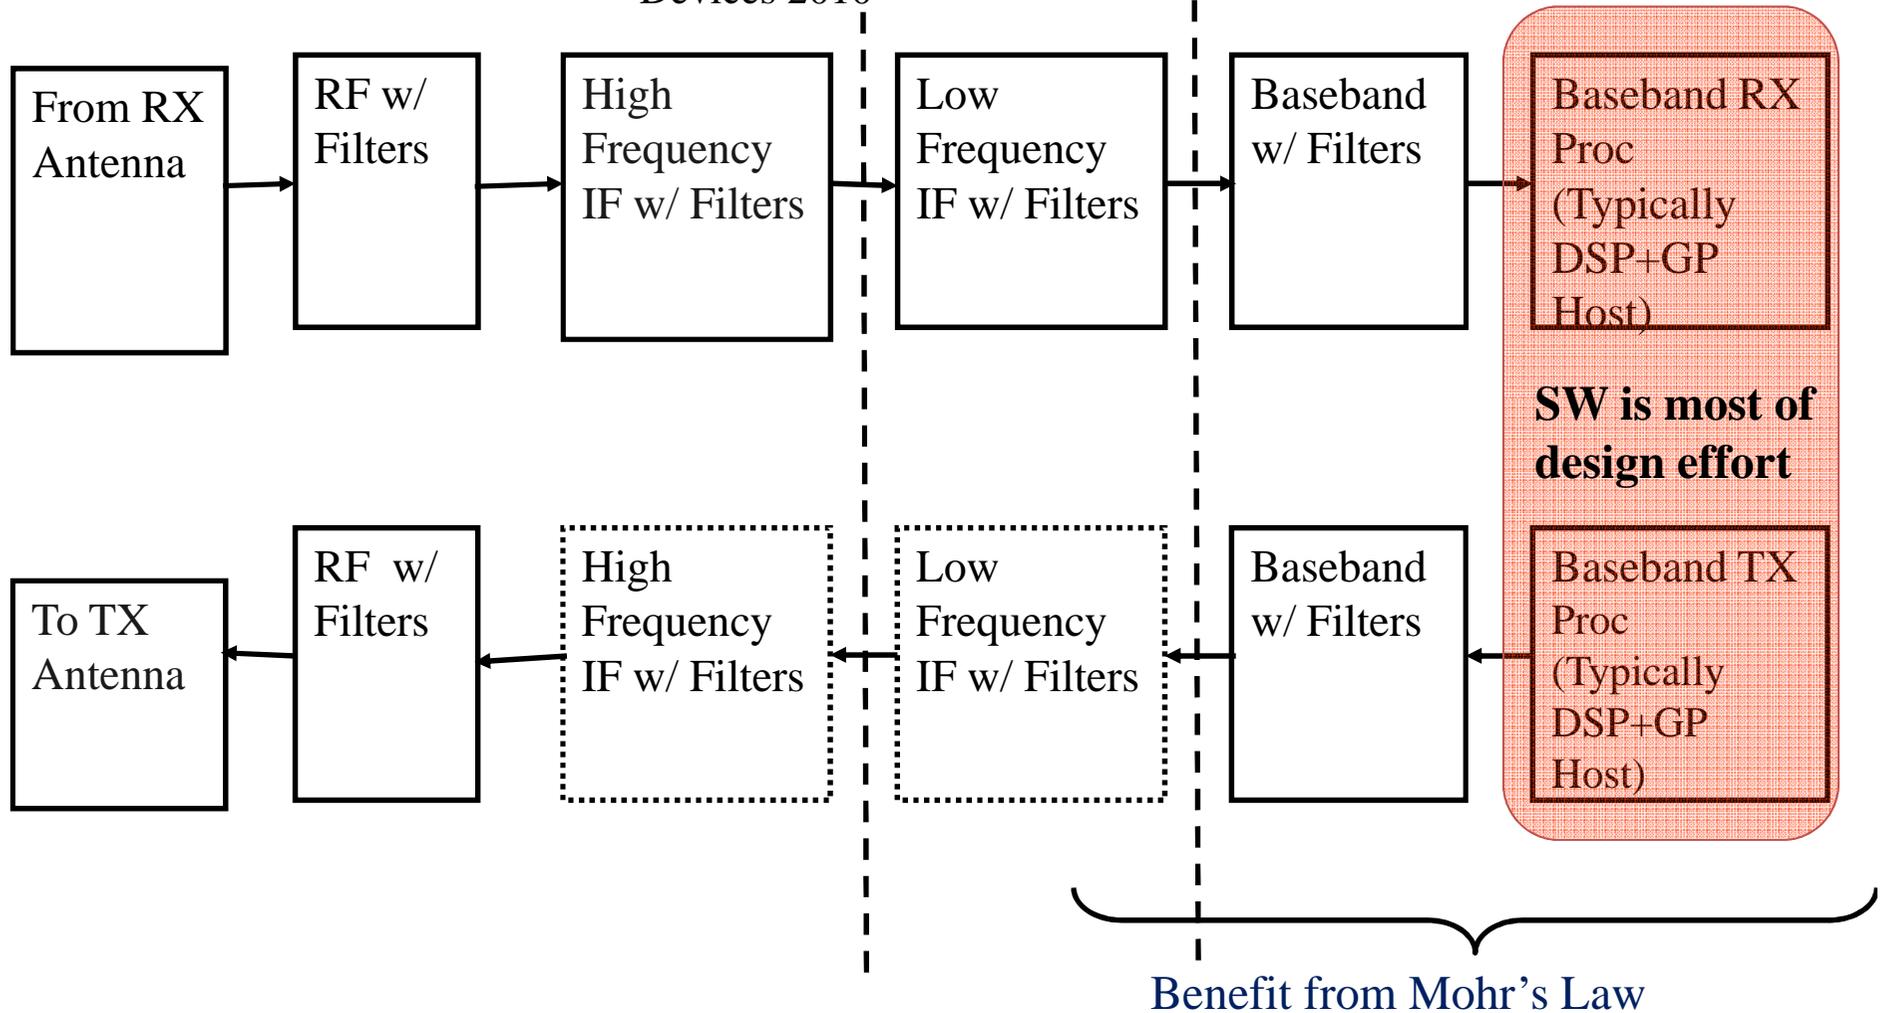

# SDR Architecture Evolution in PS Radios

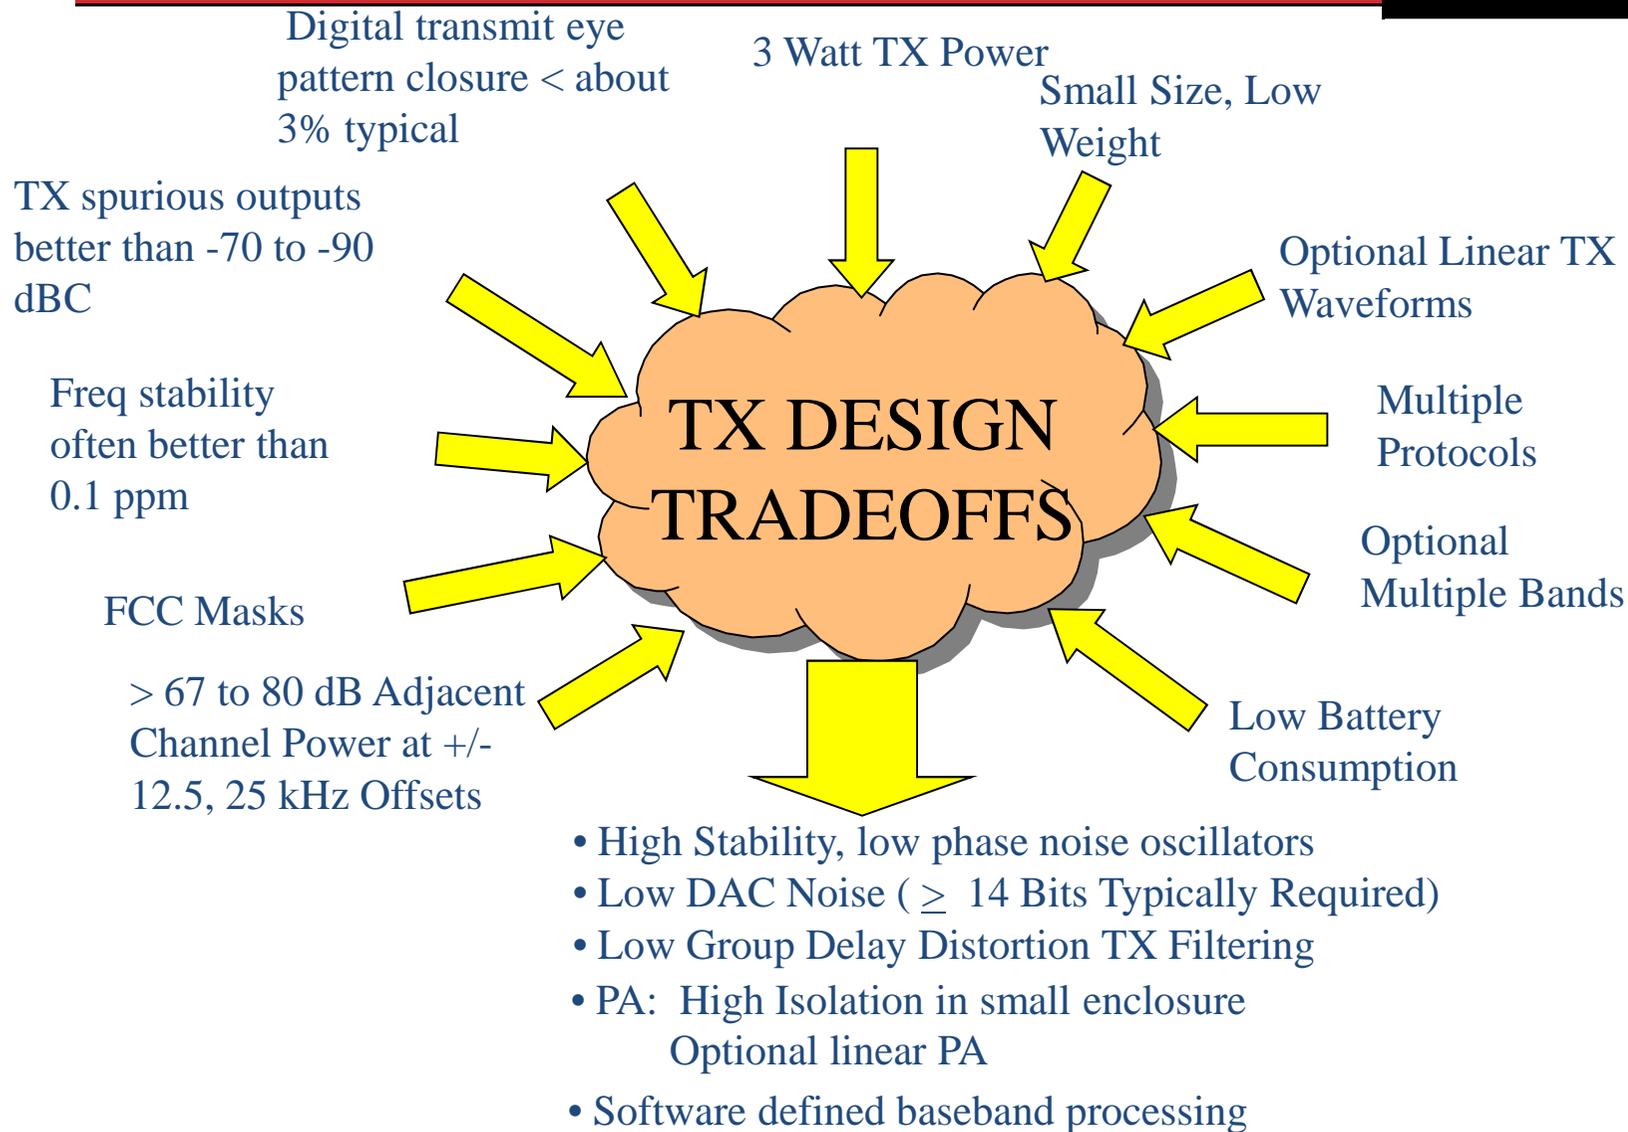

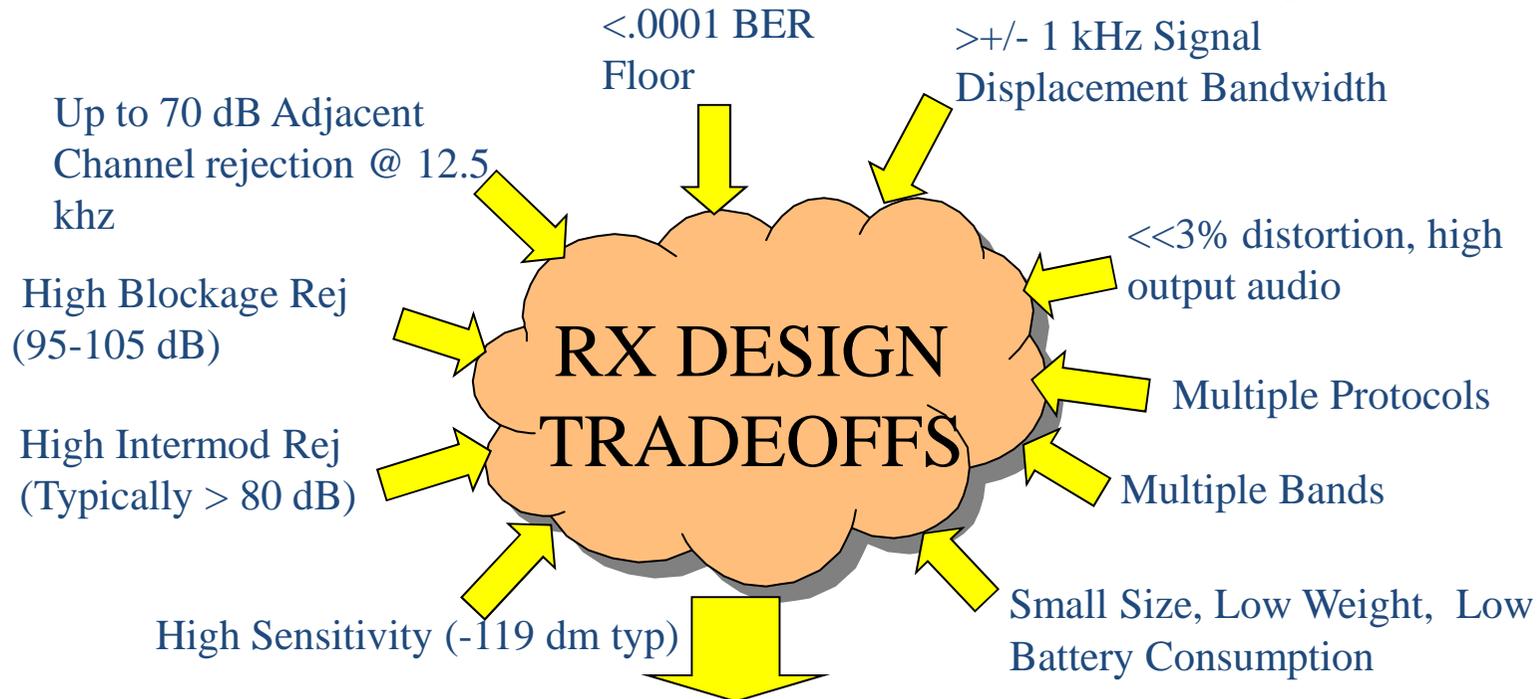

Typical Placement of A/D and D/A Integrated Devices 2010

Typical Placement of A/D and D/A Devices 2006

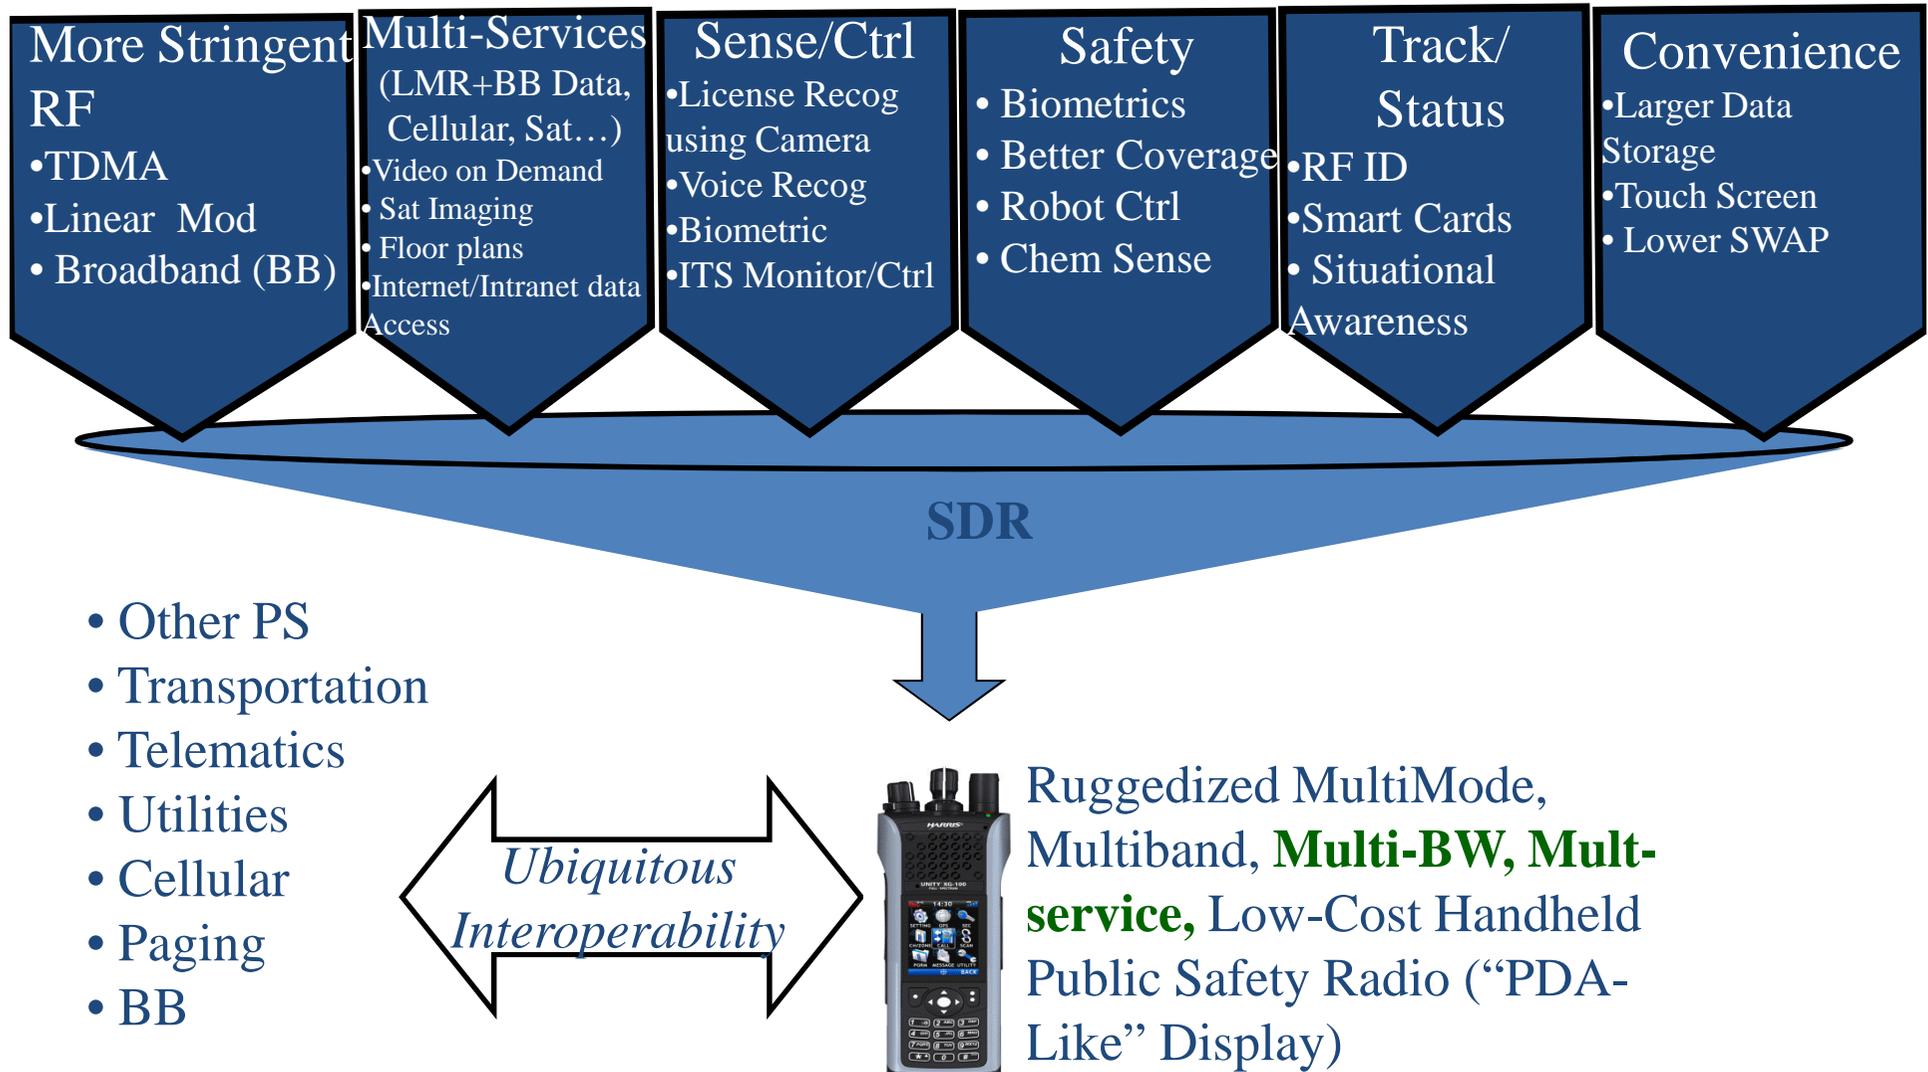

# SDR TX HW SWaP-C Tradeoffs **HARRIS**

- Low Noise, High Dynamic Range Front End
- Low Phase Noise, Stable Oscillators
- RX IF and BB Filters with Low Group Delay Dist, yet high selectivity
- High Dynamic Range If-Baseband and A/Ds ( $\geq 12$  Bits)
- AFC
- High Dyn Range, Low Noise CODECS, SPKRs, Mics, and Audio Circuitry
- Software defined baseband processing (typically DSP + GP Host)

# What More Can SDR Do?

# ***Example of Advanced Portable Capabilities Afforded by SDR Today***

- **Situational Awareness in the Field**
  - GPS built in
  - Sends/Receives positional data
  - Large color display
  - Memory capacity to support street level mapping (future)
- **Secure Bluetooth® Wireless Technology**
  - Secure Wireless Connections
  - Audio Accessories
  - Wireless Radio Programming
- **2 Microphone, DSP Noise Cancellation**

# ***Cognitive Radio- What Makes Sense for Public Safety?***

---

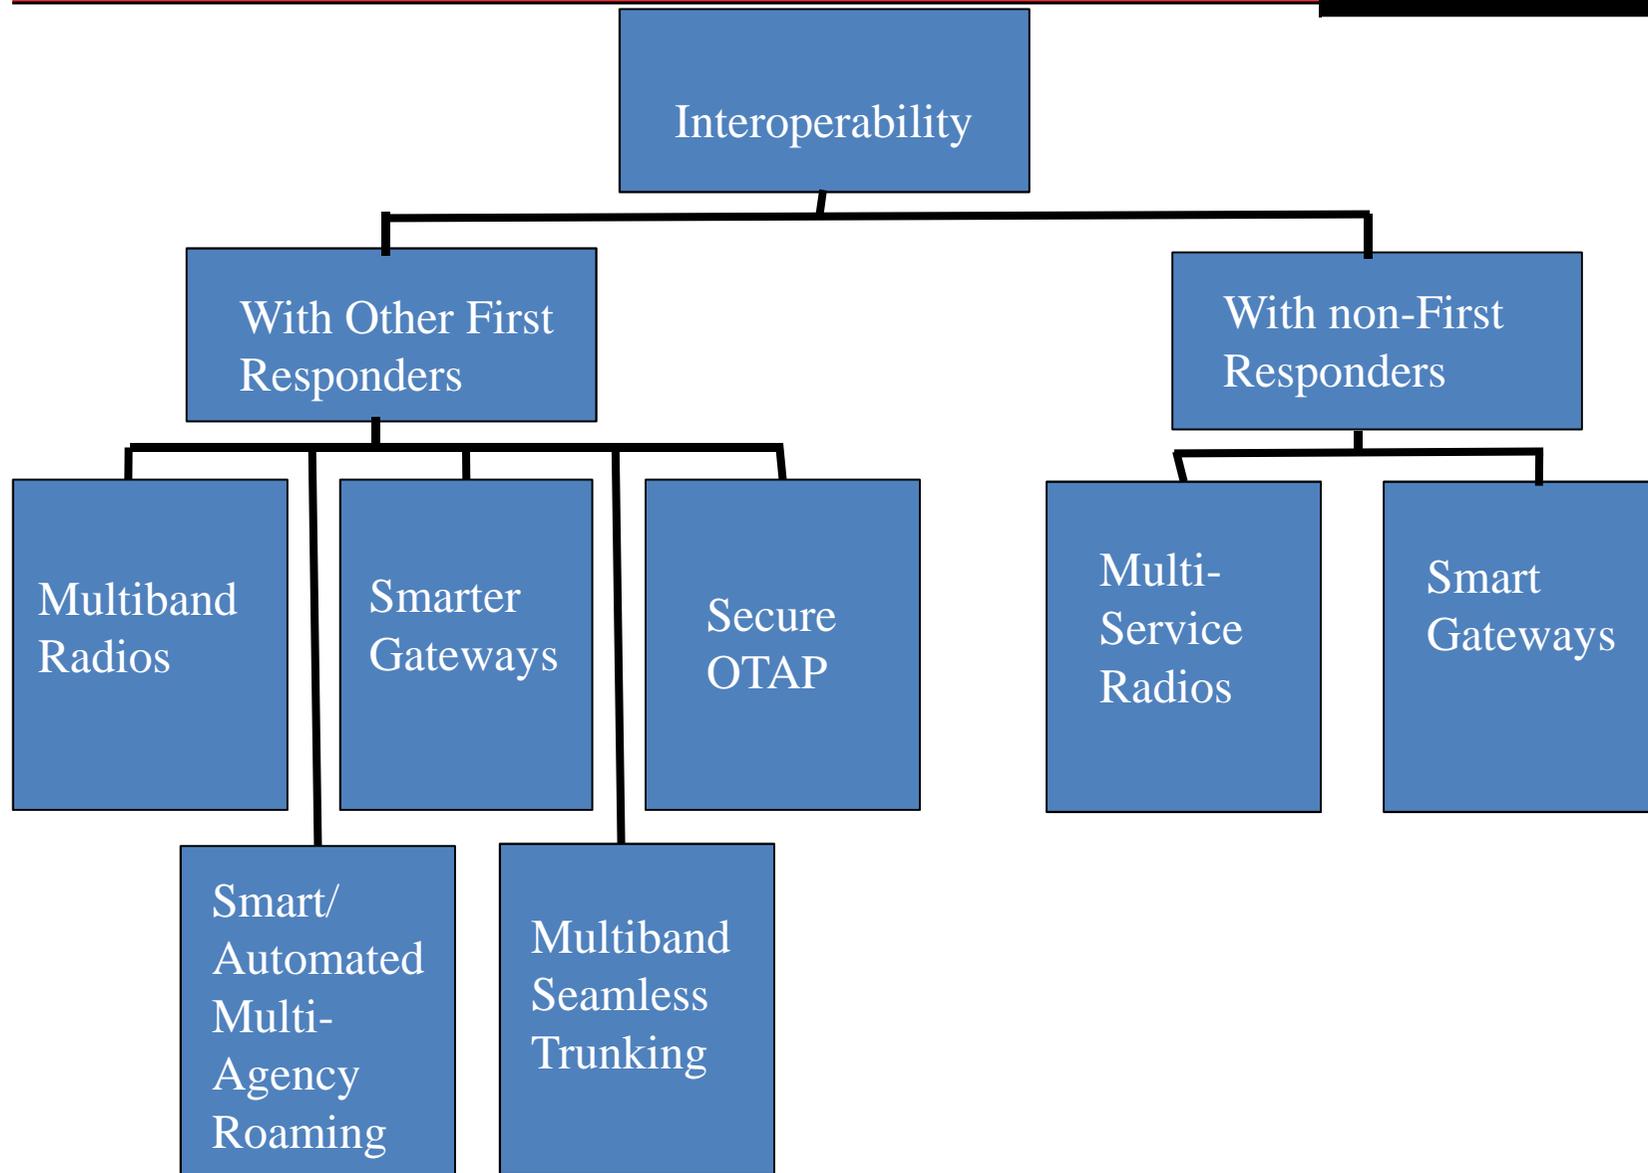

- Trunking and Roaming Exist Today- Are They Cognitive?
- PSSIG's CR Use Case Documents Are On Target for Setting Direction for New CR Capabilities
  - Interoperability
  - Incident Coordination and Aiding Decisions
  - Spectrum Efficiency Enhancements/Dynamic Spectrum Access
  - Coverage Enhancements
  - Resource Management
  - Communicate New Configurations and Rollback

# Not a Solution for Interoperability

# Interoperability Enhancements

# ***Incident Coordination & Decision Aiding***

---

- **Situational Awareness** in the Field
- **Data and Control Access** to building management [alarm status/maintenance] systems.
- **Multisensor Integration**
  - Monitor weather/environmental information, Hazmat, Firefighter in-building location systems
- Video and/or other **traffic and transportation data** from traffic control centers and/or data from traffic sensors

# ***Spectral Efficiency Enhancements/ DSA***

---

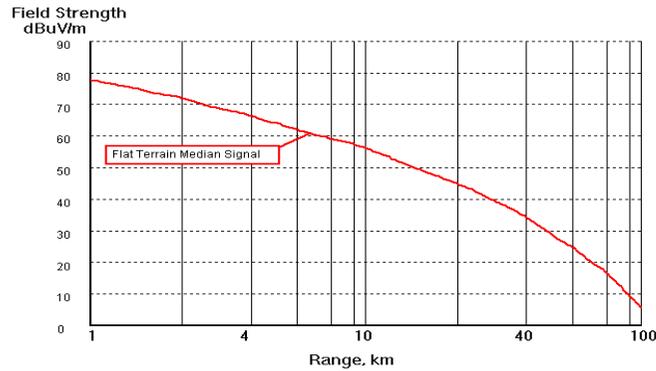

- Inter-Service
  - Spectrum Sharing
- Inter-Network
  - Dynamic Frequency Sharing/Control
- Intra-Network
  - Dynamically spectrum optimization/control .....
  - access priority per subscriber unit
  - Throttle bandwidth used per user
  - Dynamic Frequency Control

# CR's Challenges for Coverage Improvements

## Long Distance with Fading

Flat Terrain Median Signal

## In or Behind Obstructions

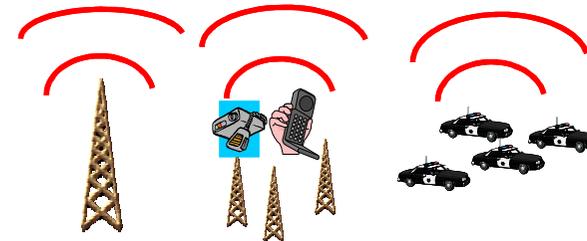

## Terrain and Foliage

## Retain Coverage During Disasters

## Interference

Nextel

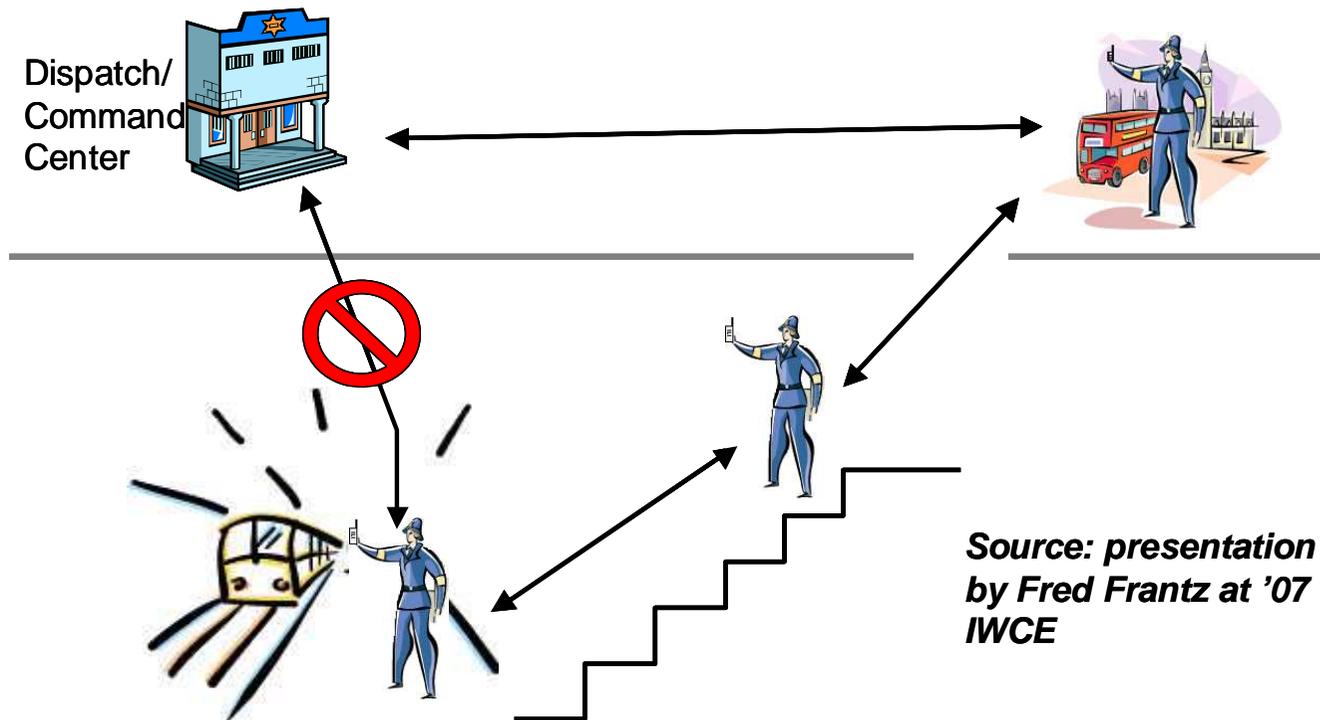

Adjacent Other Systems

Same System "Near/Far"

# Previous Coverage- Related Use Cases from the PSSIG

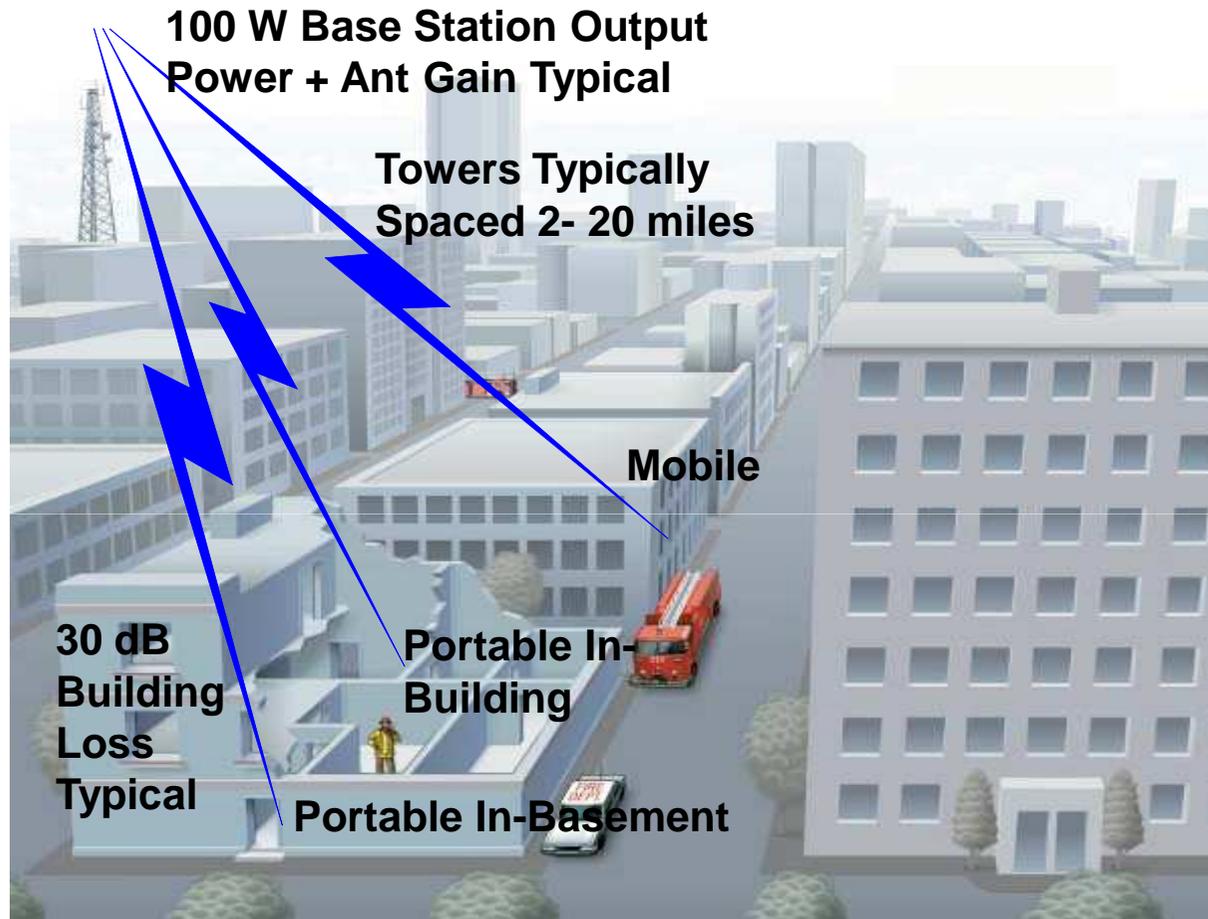

- London Bombing Use Case Coverage Extension

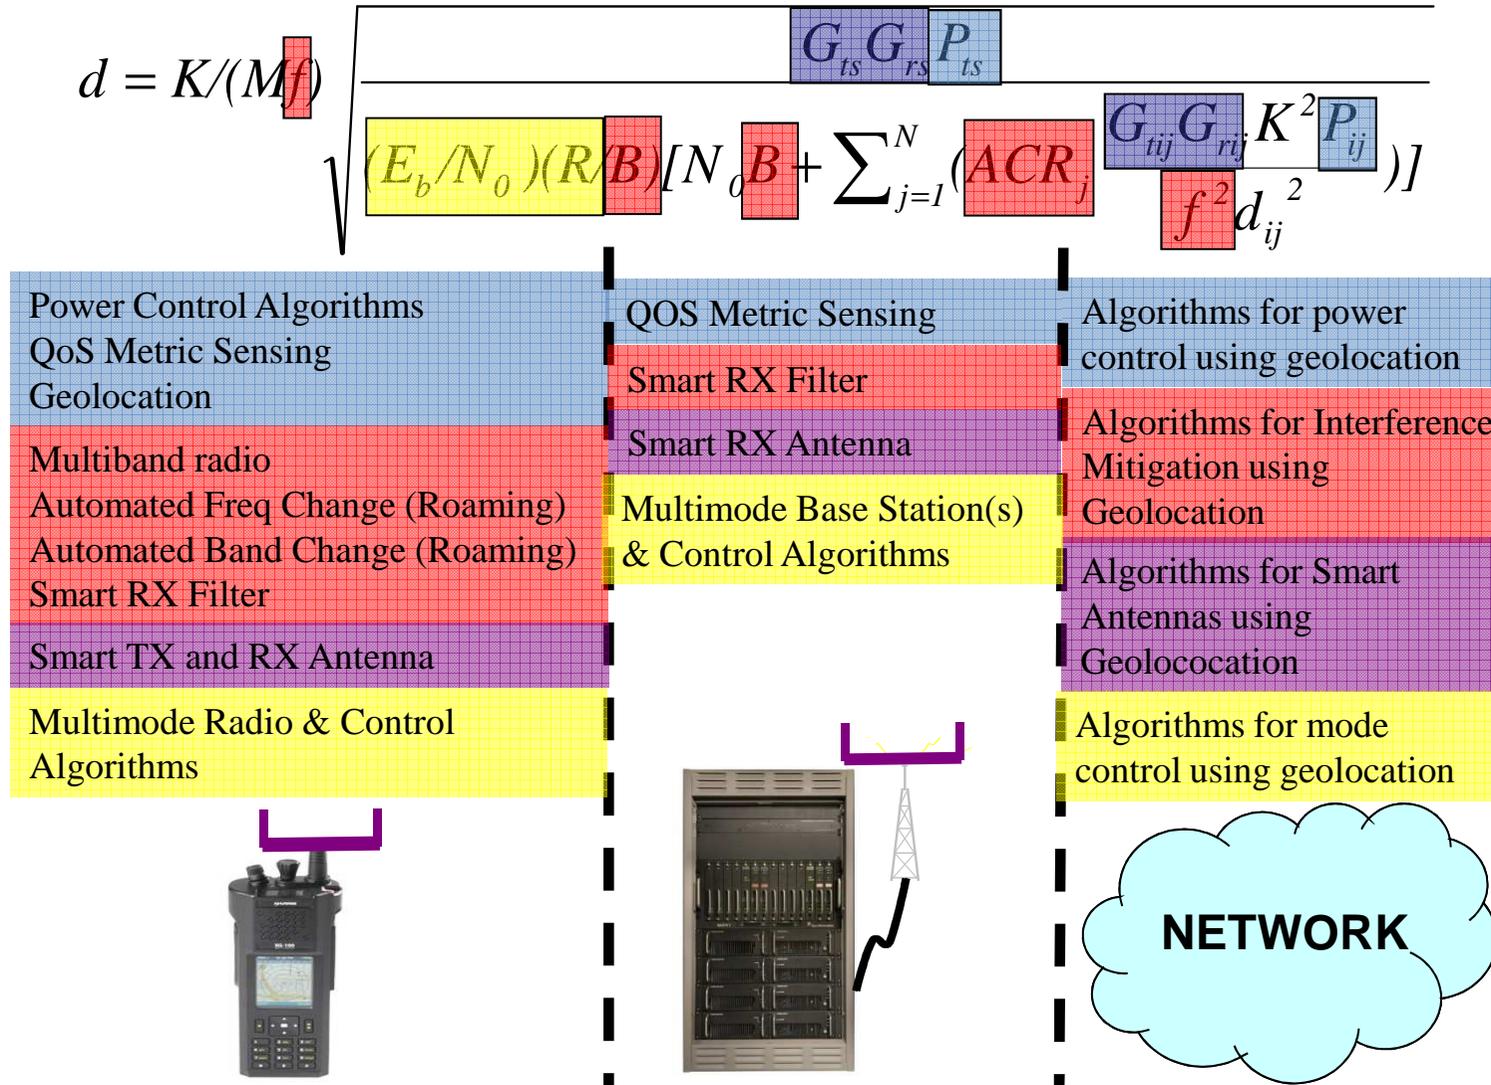

- Chemical Plant Scenario Interference Mitigation
  - This Presentation is an Expansion of Use Case 4, “Coverage Performance Improvement”

# ***CR Must Address Typical Coverage Requirements***

- **Coverage Reliability Req't Typically 95-98%**
- **Service Areas: From Small Towns Through Statewide**
- **3 Watts Portable Output Power**

# “Simple” CR Link Budget and Interference Rejection Enhancements

# ***What Does the Future Hold for SDR and CR?***

- Advances in Designs
  - *As SDR & CR technologies advance, so will the radio design*
- Advances in Requirements
  - *Should continue to evolve to keep pace with SDR technologies*
  - *Requirements developers (standards organizations, users, and technical consultants) must be cognizant of SDR's and CR's cost/benefit tradeoffs in order to judiciously levy new requirements*
  - Radio designers/manufacturers must work with those that establish the public safety radio requirements to provide feedback and education

**Bottom Line: Smart Evolution, Not Revolution**

# Key Points of This Presentation

- SDR for Public Safety....
  - is not a “magic bullet”, just a collection of technologies
  - continues to enable advancements in radios’ capabilities in a way that makes sense from SWAP-C tradeoffs
  - since the last SDRF PS Workshop on 2006, has made multiband radios a reality
  - is far from passé yet; multi-service, multi-bandwidth radios are next in the industry
- CR for Public Safety....
  - is really nothing mysterious, just automation of smart decisions
  - is used in manufacturers’ radios today (e.g., trunking, roaming), but...
  - more CR capabilities should continue to be implemented in a “baby step” fashion, especially for coverage enhancements

**Bottom Line-** Both SDR and CR are *Evolutionary, not Revolutionary*, exist in Public Safety systems and radios today, and will continue to evolve to enable further advancements in capabilities
