Space Communications and Navigation (SCaN) Testbed

SCaN Testbed Architecture

SCaN Testbed - subsystems

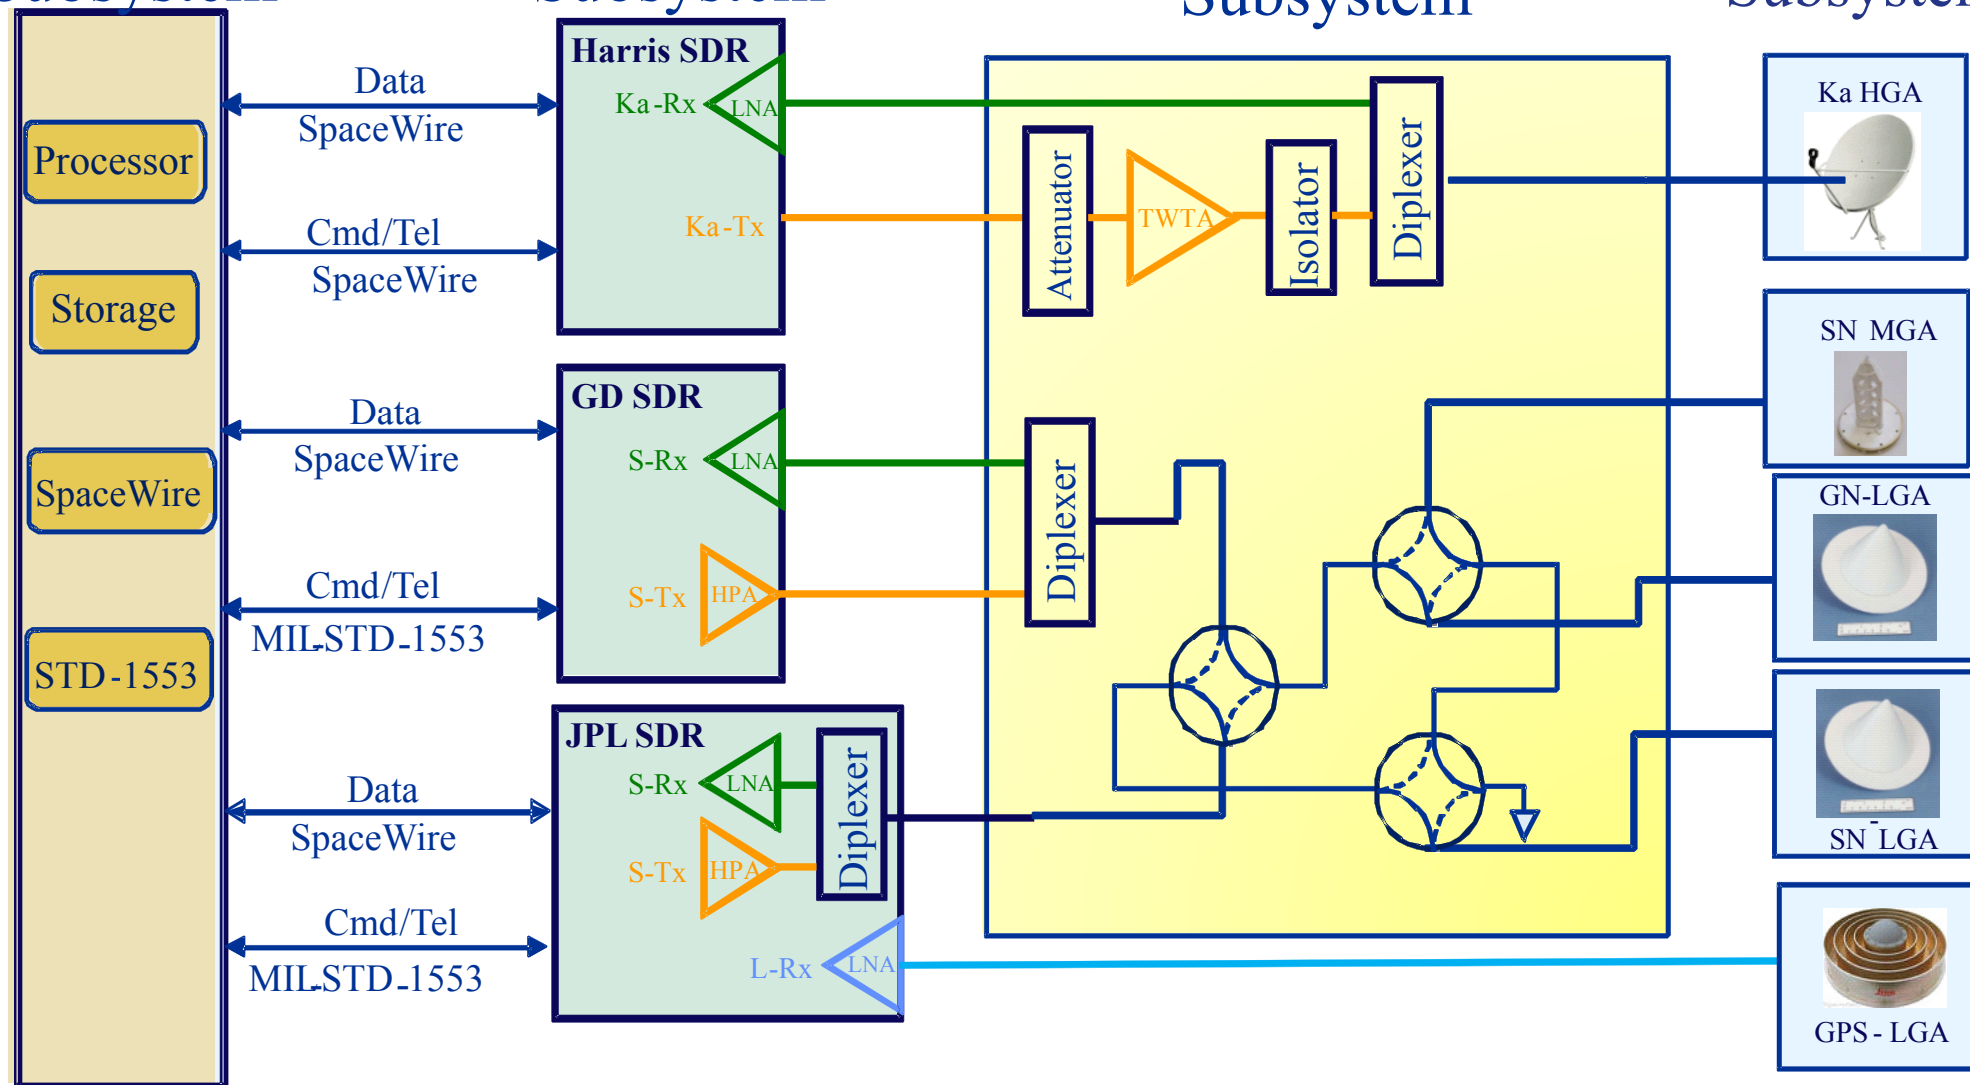

Avionics Subsystem

SDR Subsystem

RF Subsystem

Antenna Subsystem

SCaN Testbed - Software Defined Radios

◆ General Dynamics (GD) SDR

- 60 MIPS Coldfire (VxWorks) and (1) QPRO FPGA
- S-Band transceiver (2.0 – 2.3 GHz) with 8W amp
- 1M chalcogenide non-volatile phase-change memory.

◆ Jet Propulsion Laboratory (JPL) / L3-CE SDR

- 66 MHz SPARC (RTEMS) and (2) Virtex2 FPGAs
- S-Band transceiver (2.0 – 2.3 GHz) with 7W amp
- L-Band receiver at L1, L2c, and L5 GPS frequencies

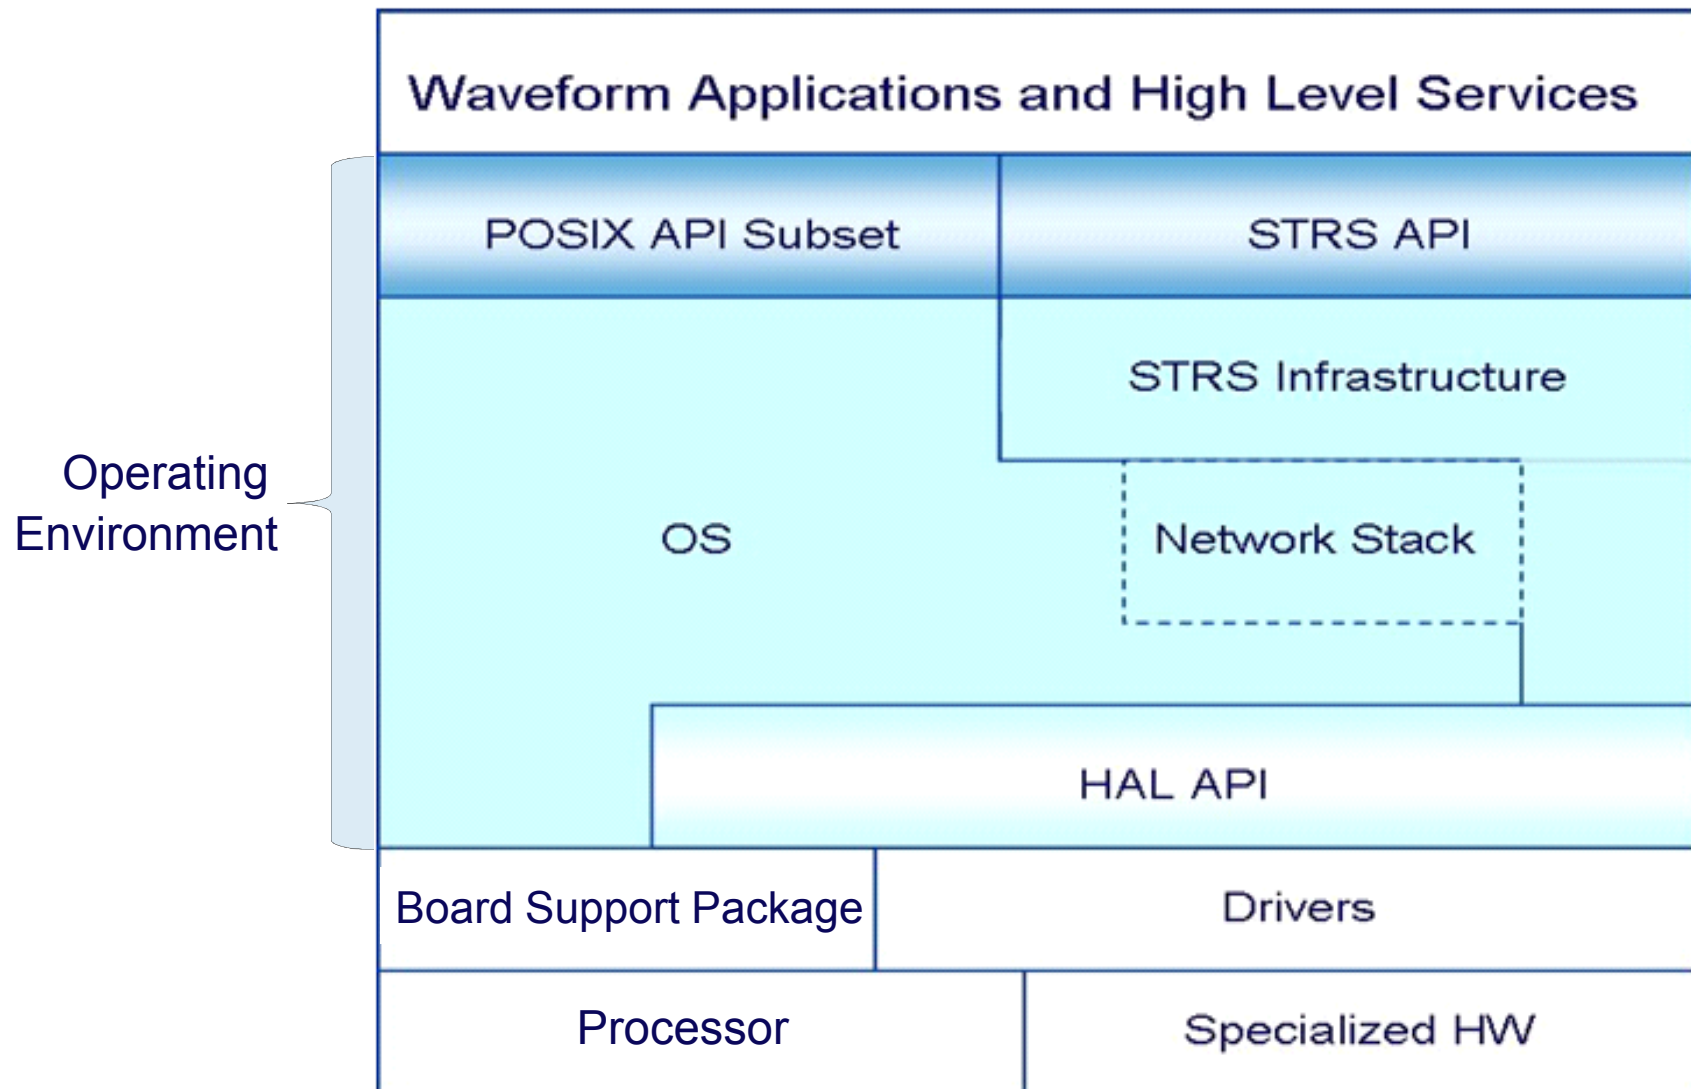

◆ Harris Corporation SDR

- 700 MIPS PowerPC (VxWorks) and (4) Virtex4 FPGAs
- Ka-Band transceiver (22 – 26 GHz) with 40W TWTA
- DSP for enhanced signal processing.

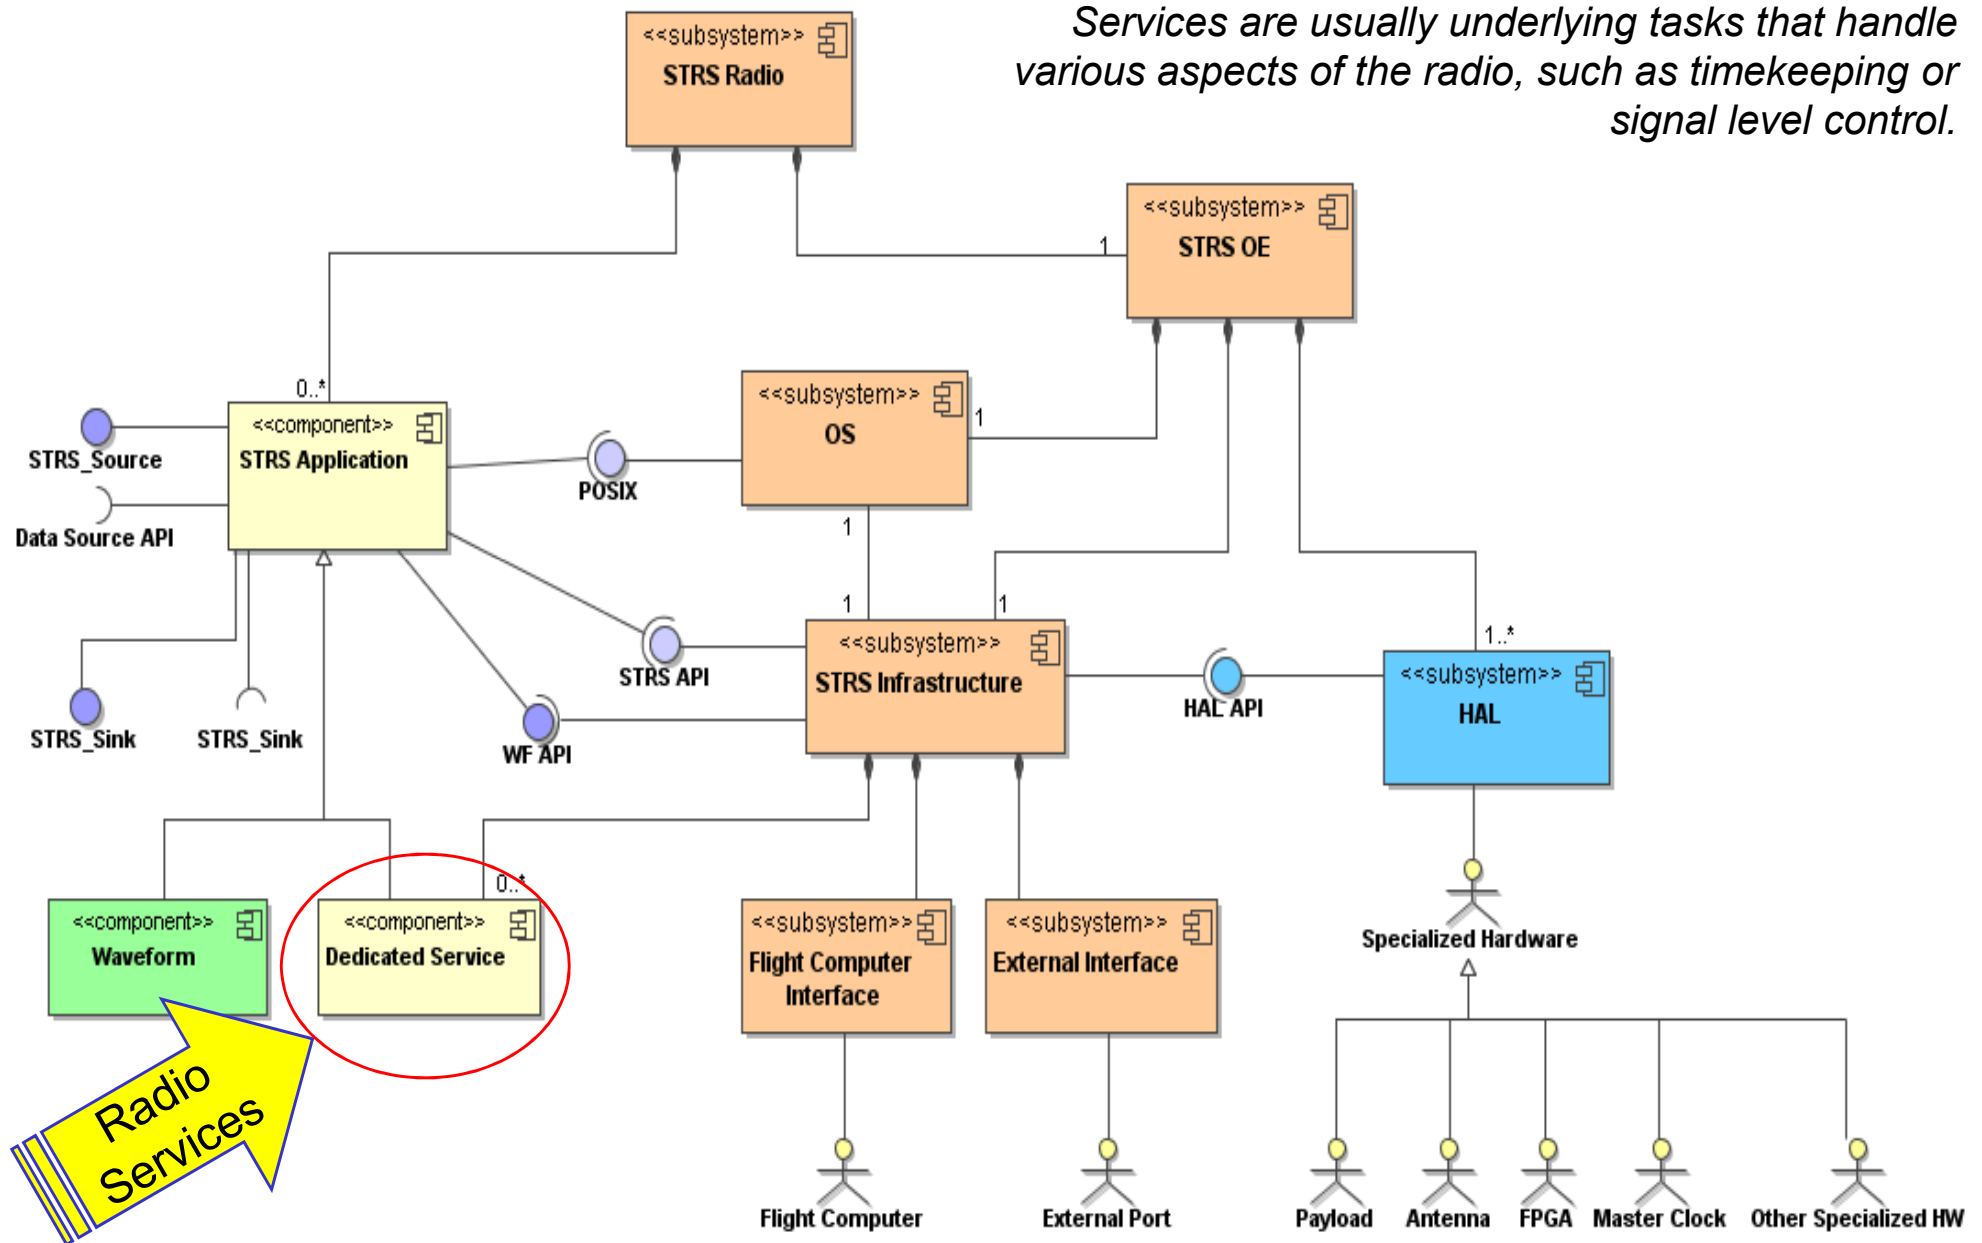

Space Telecommunications Radio System

STRS Architecture Components

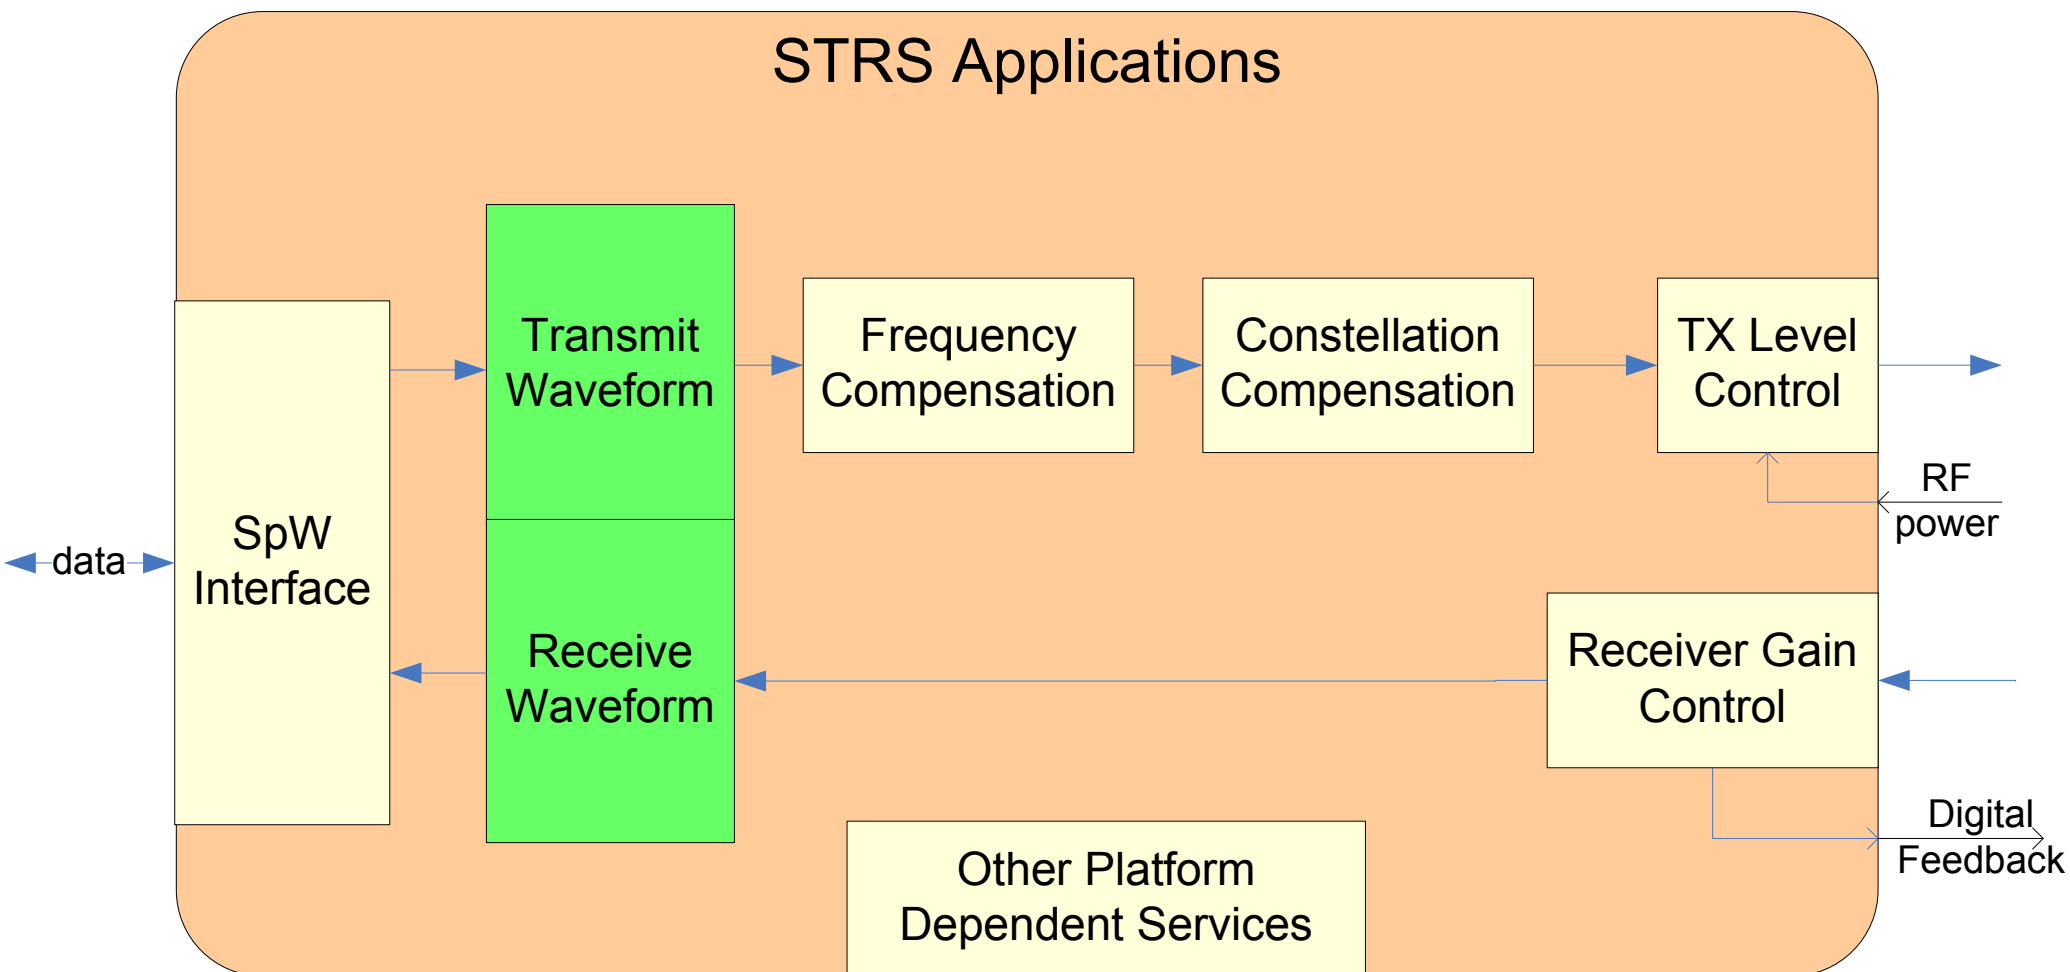

- Radio Services

Services are usually underlying tasks that handle various aspects of the radio, such as timekeeping or signal level control.

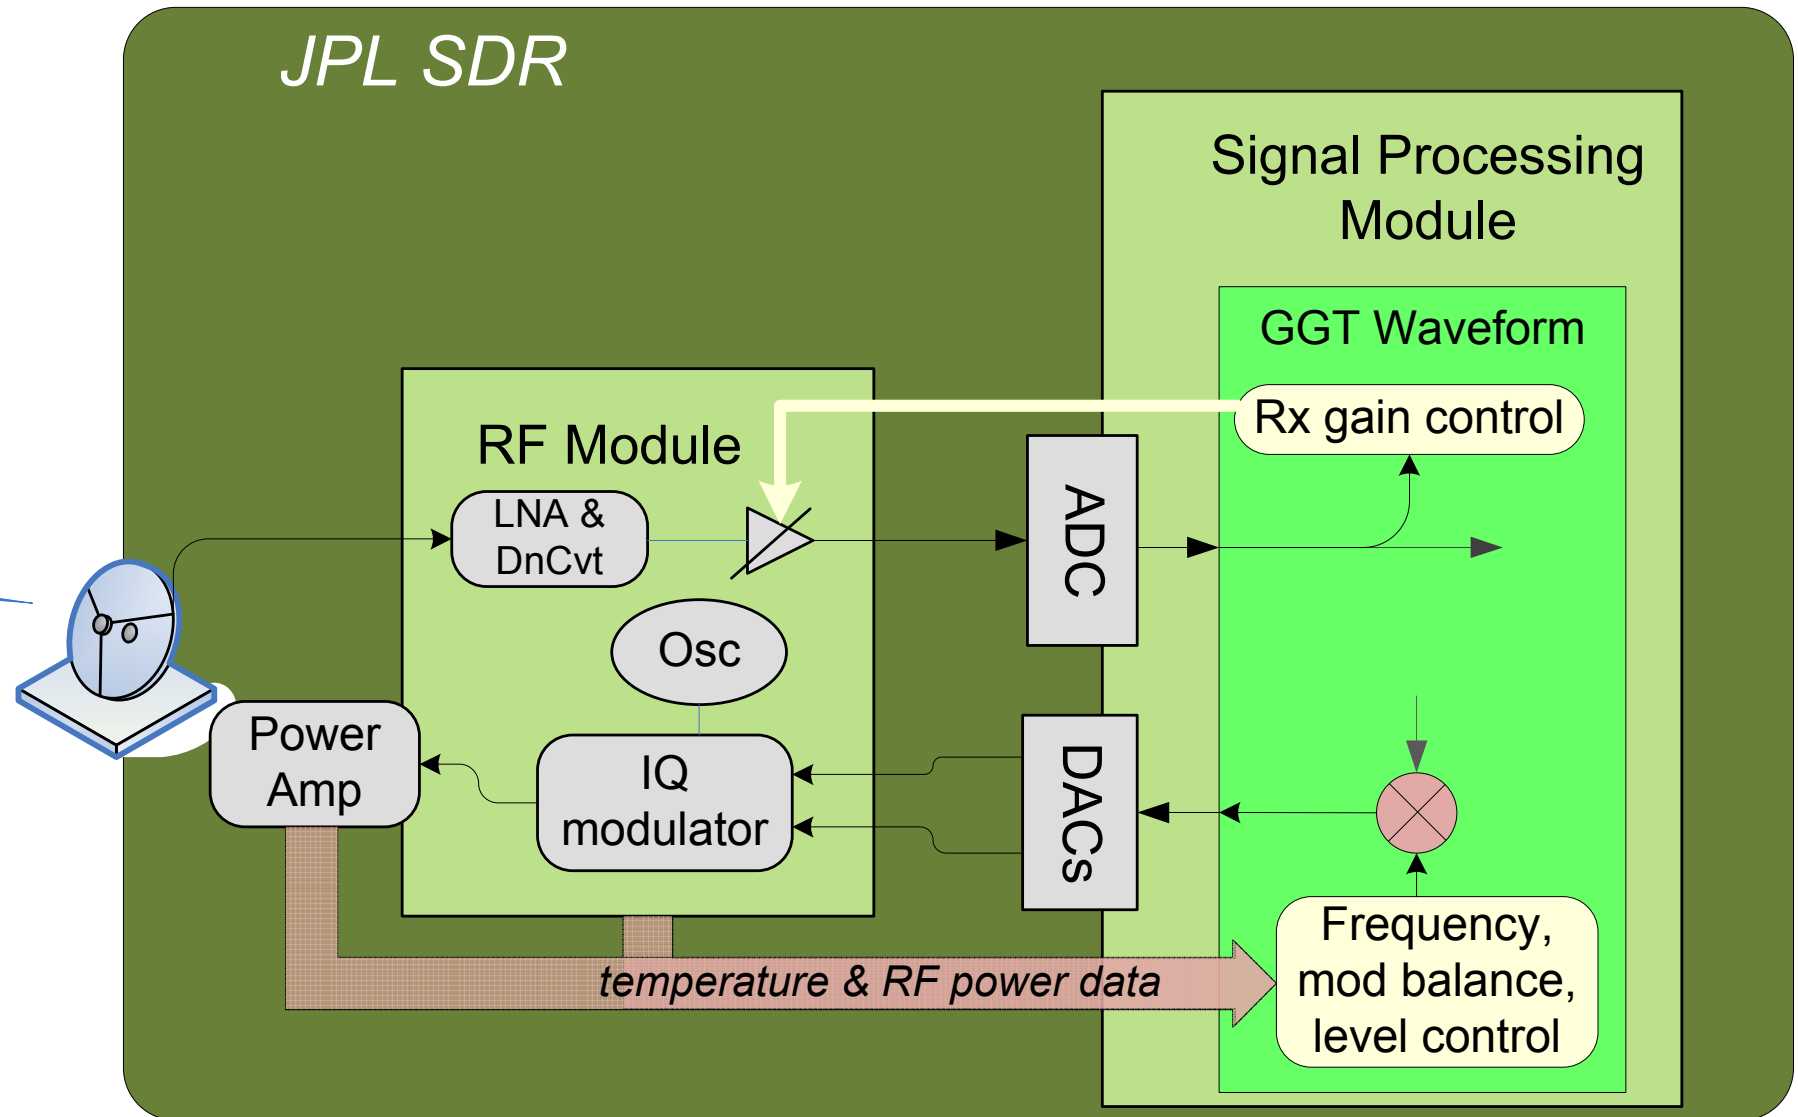

Radio Services in Waveform Signal Flow

Radio Services with RF Module

Services are re-configurable on-orbit.

Frequency Offset vs. Oscillator Temperature

Baseband I & Q data frequency shifted to trim transmitter output over temp.

Temperature Compensation - modulator

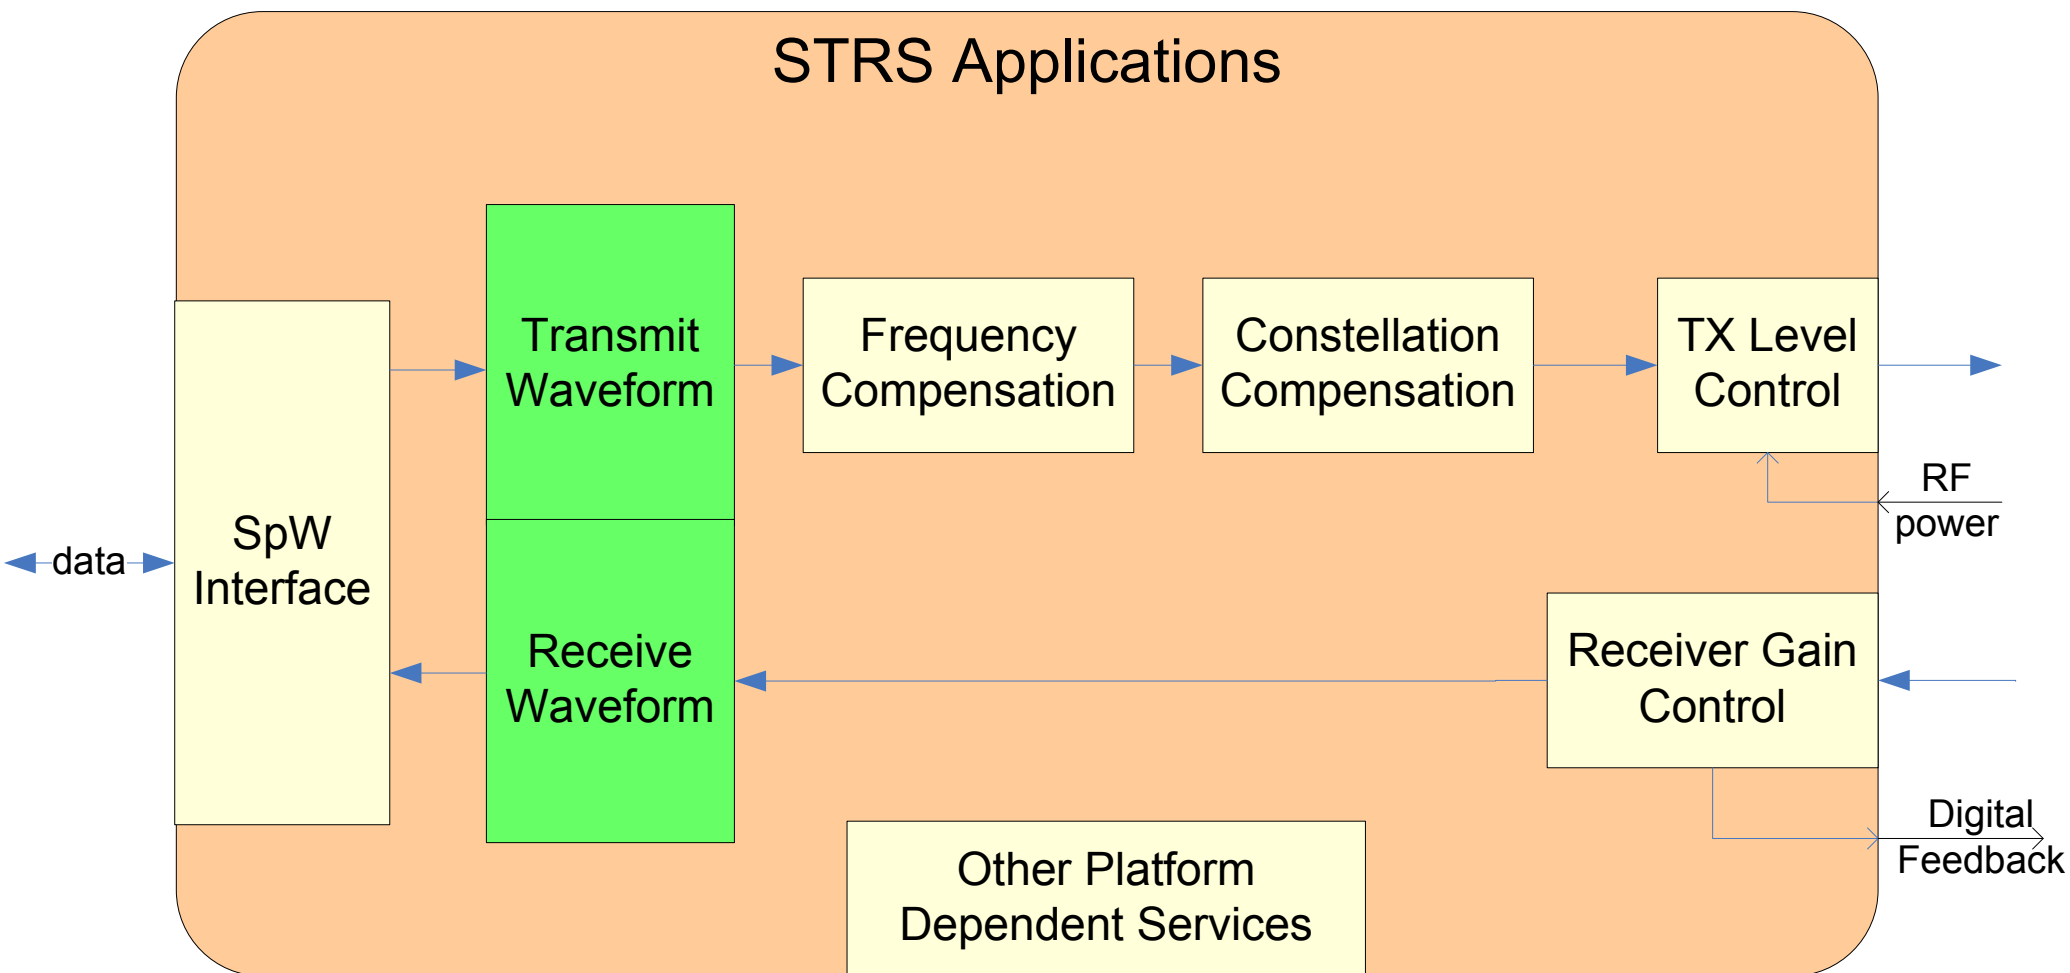

Digital baseband pre-compensation of analog modulator

- ◆ DC offsets
- ◆ DC levels
- ◆ Phase offset

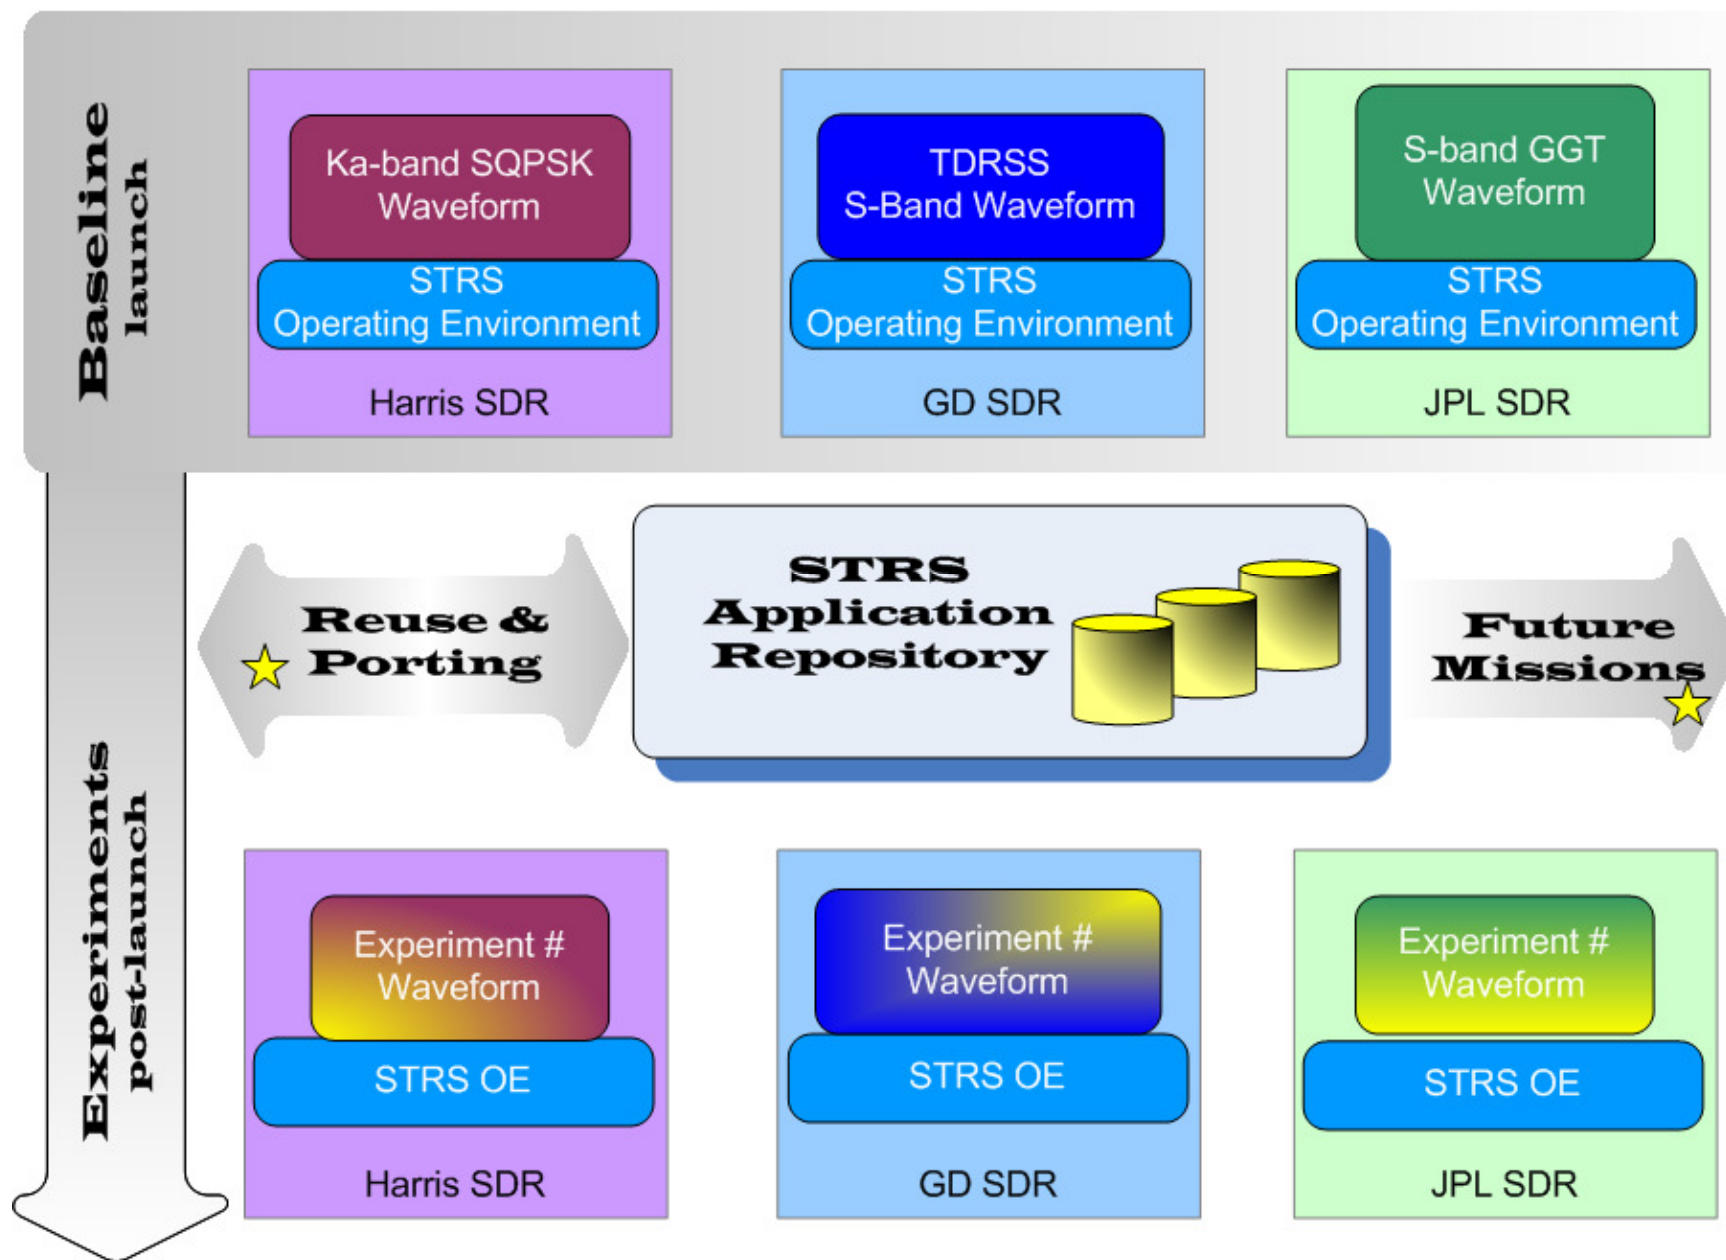

Radio Services in Waveform Signal Flow

SDR Waveforms – STRS Repository
