Introduction to Model-Based Testing

MBT for Conformance Testing

- MBT modeling from a standard (e.g. SCA 2.2.2 specifications)
- Test selection criteria are used to generate the adequate conformance test suite
 - Typically, 2 to 5 abstract test cases for each functional requirement
- Automated publication of abstract generated conformance tests:
 - To create a documented test repository (using a test management tool), including traceability between requirements and tests
 - To generate executable test scripts for test execution automation

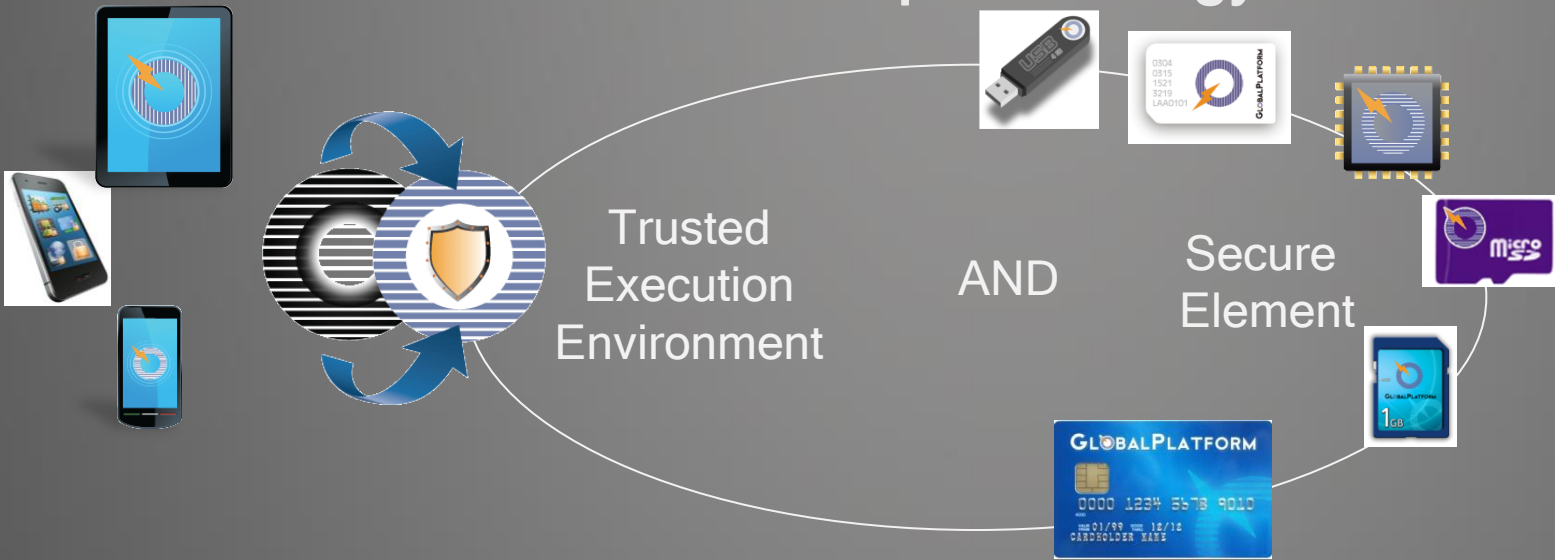

Agenda

- Context and motivations
- **MBT for Conformance Testing - GlobalPlatform compliance program**
 - Introducing GlobalPlatform
 - Model-Based Compliance Test Generation: Process and results
- Application to SCA 2.2.2
- Lessons learned and Conclusion

GlobalPlatform Positioning

GlobalPlatform is the standard for managing applications on secure chip technology

Across several market sectors and in converging sectors

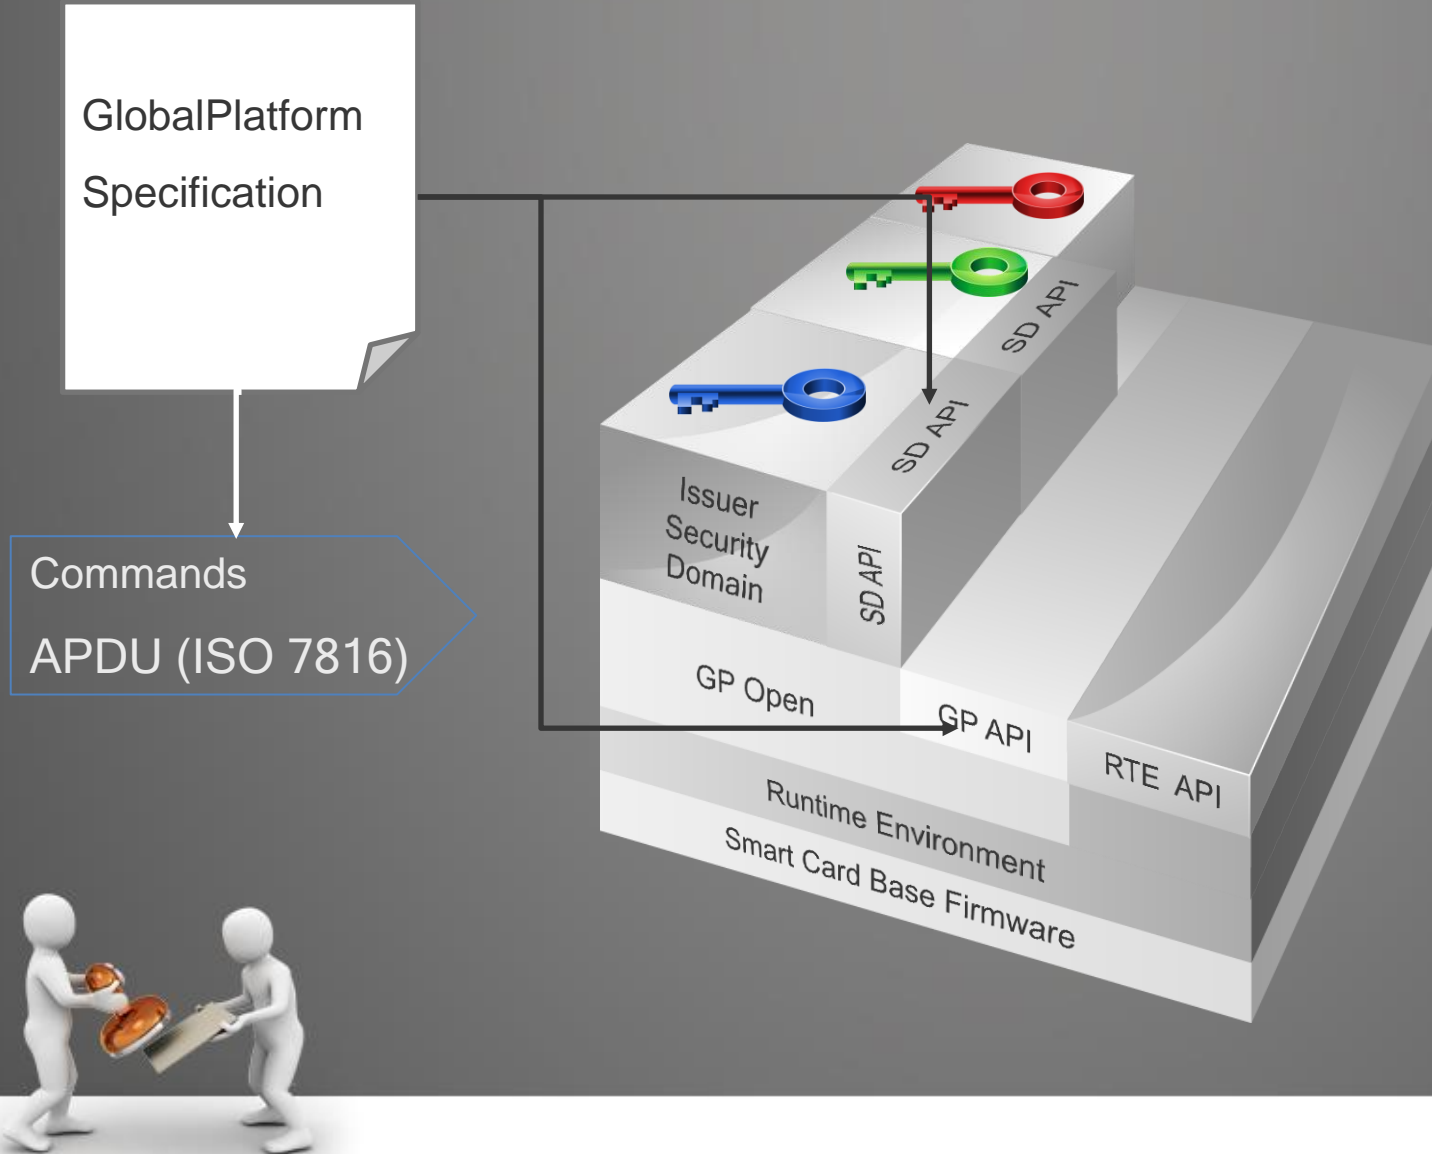

Introducing GlobalPlatform standards...

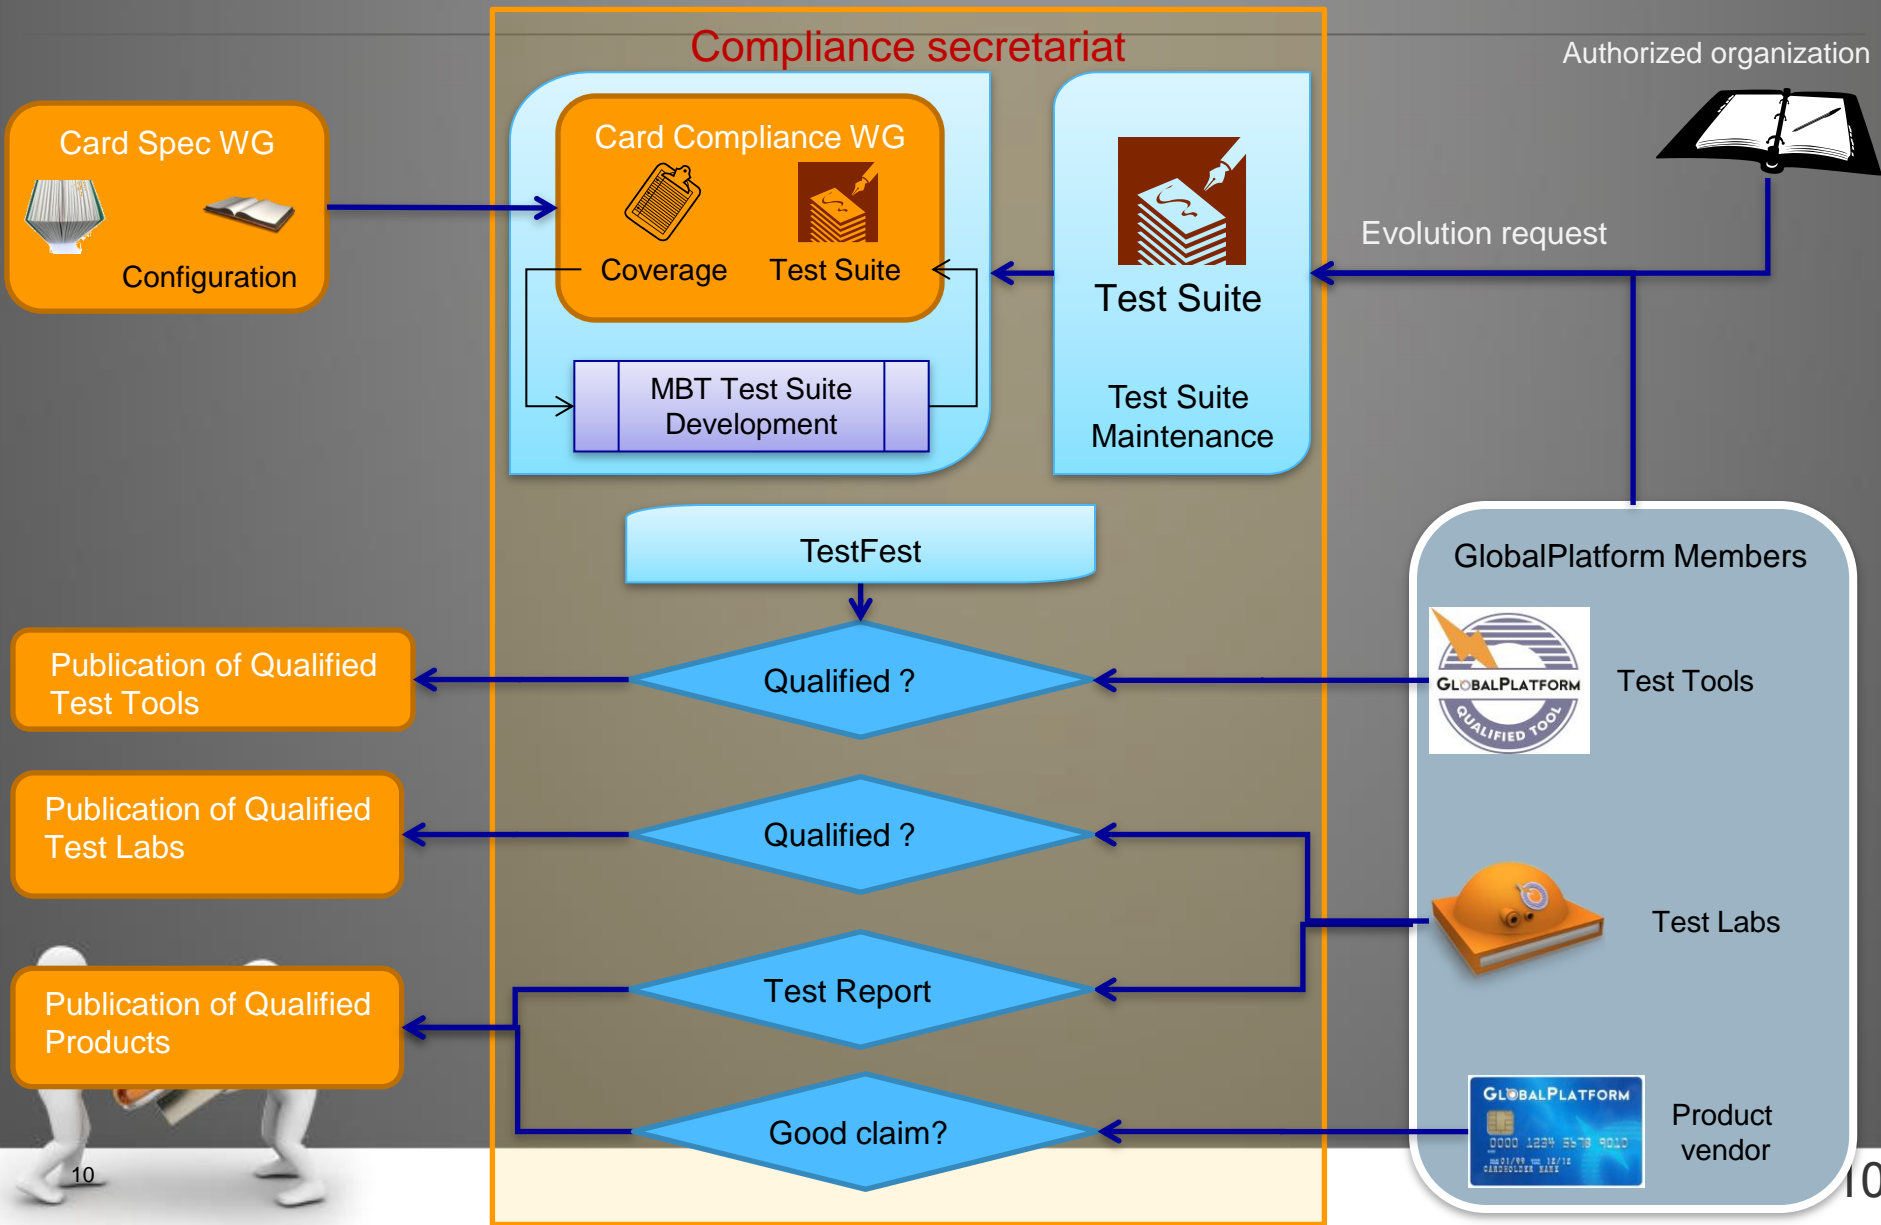

- Since 1999, With GlobalPlatform standards:
- Create once based on -
 - Stable and interoperable Application Programming Interfaces (APIs)
 - Stable security requirement
- Deploy 'everywhere'

GlobalPlatform Card Framework Reminder

GlobalPlatform Compliance Program Process

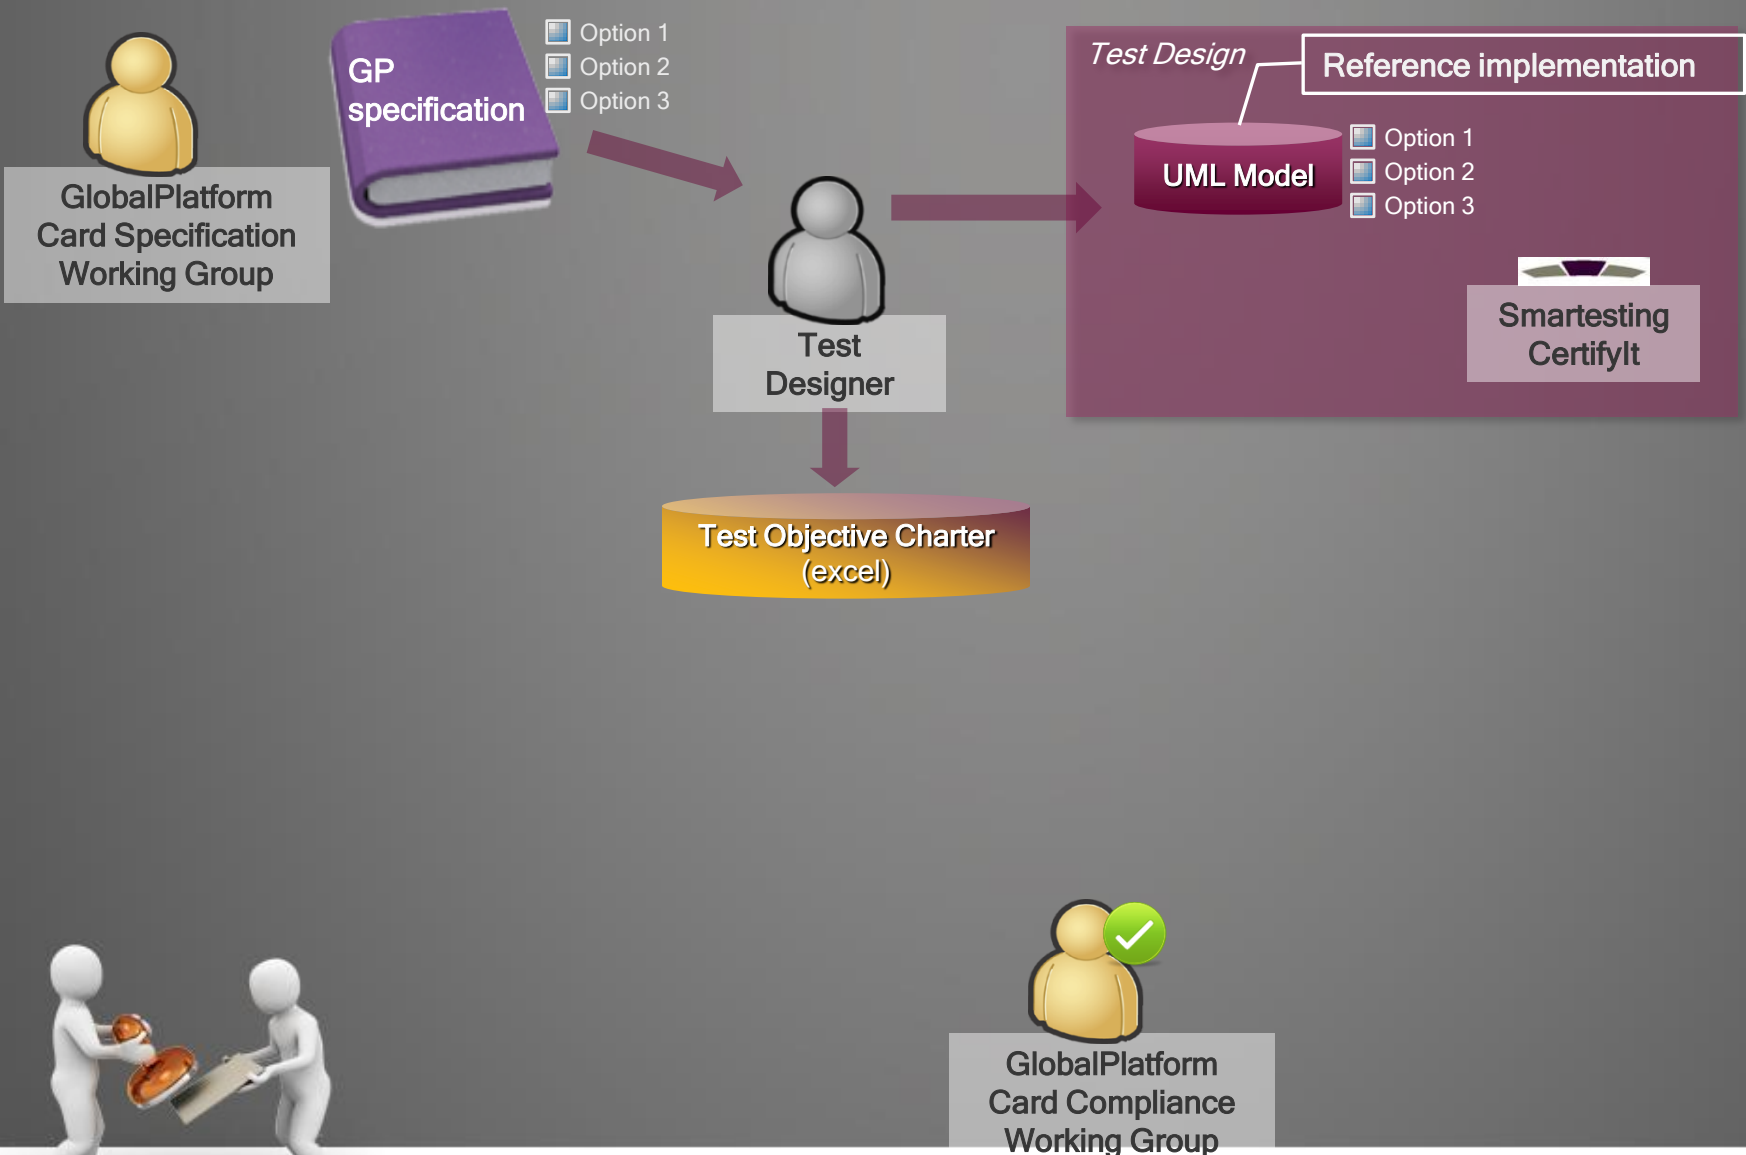

Challenges about Test Suite Development

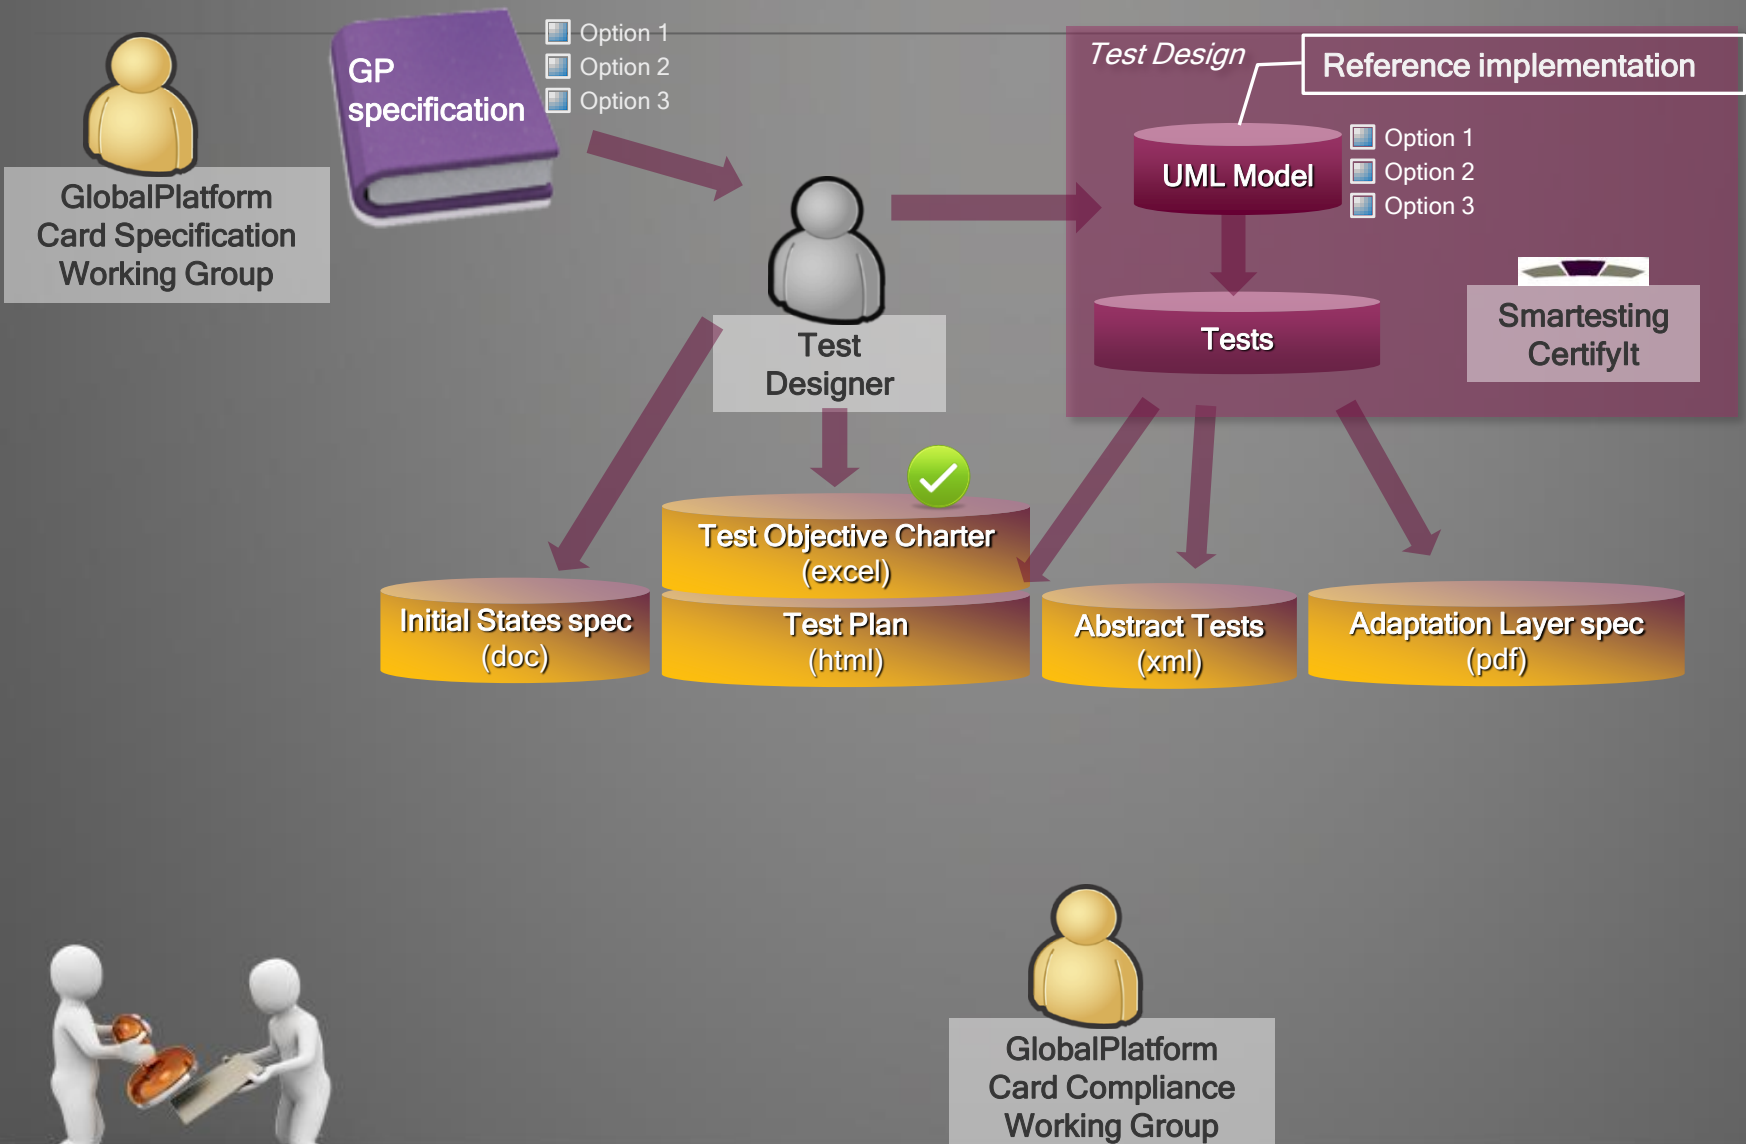

- The test suite shall be open to any test execution tools
- The variants in specification and in test suite shall be managed efficiently
 - Generic specification with various specific configurations spec
 - Test Suites are developed for each specific configurations spec
 - Challenge is to reuse the generic part and to manage the specific part in an efficient manner

the requirement

	A	B	C	D	E
1	Functional Req	Doc	Ref	Config	Aims
36	APDU_EXTERNAL_AUTHENTICATE_ ERROR_MISSING_PREVIOUS_INITIALIZE_UPDATE	Mapping Guidelines 2.1.1 on 2.2	\$6.2.2		NO_PREVIOUS_INITIALIZE_UPDATE
37	If a previous INITIALIZE_UPDATE command has not been received, a response of '6985' is returned.				ANOTHER_APDU_AFTER_INITIALIZE_UPDATE
38	ERROR_APDU_EXTERNAL_AUTHENTICATE_Missing_InitializeUpdate				
39	APDU_EXTERNAL_AUTHENTICATE_ ERROR_BAD_CLA	Mapping Guidelines 2.1.1 on 2.2	\$6.2.2		BAD_CLA
40	If the class byte excluding the Logical Channel number is not '84', a response of '6E00' is returned				
41	ERROR_APDU_EXTERNAL_AUTHENTICATE_BadCLA				

Deliverables

- One deliverable in HTML containing
 - All test compliance packages

Adaptation Layer Spec
(PDF)

Initial States Spec
(PDF)

Test Plan
(HTML)

Abstract Tests
(XML)

The screenshot shows a web browser window titled "GlobalPlatform deliverable". The page features the "smartesting" logo with the tagline "Optimize your Test Center" and the "GLOBALPLATFORM" logo with the tagline "THE STANDARD FOR SMART CARD INFRASTRUCTURE". The main heading is "UICC v1.0 compliance test packages - 26/Feb/2010". Below this, there are two main sections: "Common documents for packages" and "Package CardContentManagement v4". The "Common documents for packages" section lists several links: "Adaptation layer specification v4 (PDF)", "Adaptation layer - Comparison with previous version", "Issue tracking (N/A, corrected and pending issues)", "Status Word specification (XML)", "Initial States specification v3 (DOC)", "2 scripts to build SD Trees for Delete or Extradition (XML)", and "Test applet used for DS and LCM packages". The "Package CardContentManagement v4" section lists links for "Test Plan (HTML)", "Test Plan (XML)", "Comparison with previous deliverable (HTML)", and "Issue tracking (N/A, corrected and pending issues)". At the bottom, there is a section for "Package SDTree v5".

Common documents for packages
Adaptation layer specification v4 (PDF)
Adaptation layer - Comparison with previous version
Issue tracking (N/A, corrected and pending issues)
Status Word specification (XML)
Initial States specification v3 (DOC)
2 scripts to build SD Trees for Delete or Extradition (XML)
Test applet used for DS and LCM packages

Package CardContentManagement v4
Test Plan (HTML)
Test Plan (XML)
Comparison with previous deliverable (HTML)
Issue tracking (N/A, corrected and pending issues)

Package SDTree v5

Test Plan (HTML) (3/3)

Technical results (1/2)

- 15 active Compliances Test Suites
- 6 000+ tests in Compliance Test Suites
- 5 Test Tools are qualified
 - Each Test Tools is importing the generated Test Plan as XML

Technical results (2/2)

- Various domains of application
 - GlobalPlatform (Card)
 - Configurations derived from a generic spec GP 2.2
 - Telecom configuration : UICC + UICC Contactless extension
 - Banking configuration : Mapping Guidelines / Basic Financial
 - Identity configuration : ID
 - Embedded Secure Element configuration : SE
 - Generic configuration : Common Implementation
 - SWP/HCI Test Suite from **ETSI** specifications
 - GlobalPlatform (Device)
 - Trusted Execution Environment : Client API + Internal API
 - Open Mobile API Specifications from **SIMalliance** consortium
 - GlobalPlatform (System)
 - Trusted Service Manager Compliance : multi-component testing

Lessons Learned from GP Experience

- Test case generation is an automated process and so more predictive and less error-prone than manual processes.
- It gives to the generated test cases a clear functional coverage metrics from the viewpoint of the TOC.
- All generated assets (XML and HTML test suites, Adaptation Layer Specification) are kept in sync because derived from one common asset (the test model).
- It helps to leverage existing investments in test management skills, tools, and processes.
- It reduces test maintenance costs because only the test model is managed instead of the test cases.

Summary on GlobalPlatform

- From 2007 till present, the GP Compliance Program has been using Model-Based Testing to produce its compliance test suite, which is now providing a unique value:
 - the test suite (means scripts) is usable for integration to the product vendors in-house systems,
 - the test suite is open to any test tool vendor,
 - the test suite is validated in real, and
 - the test suite supports product variants.
- This MBT integration is therefore a concrete success story, which today enables and motivates GP Working Groups to extend its use, currently for system compliance

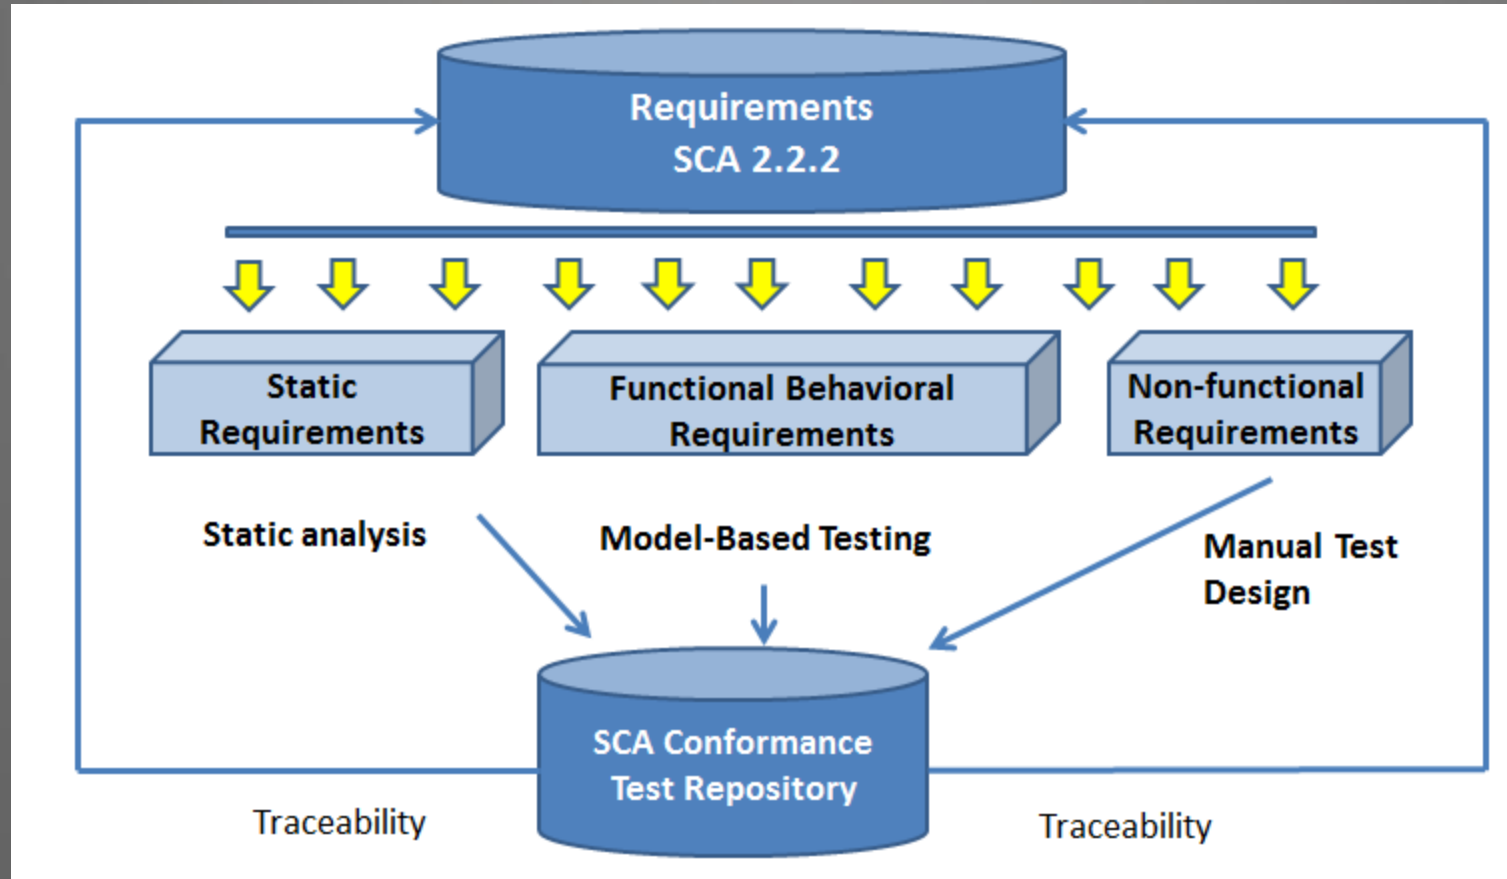

Agenda

- Context and motivations
- MBT for Conformance Testing - GlobalPlatform compliance program
- **Application to SCA 2.2.2**
- Lessons learned and Conclusion

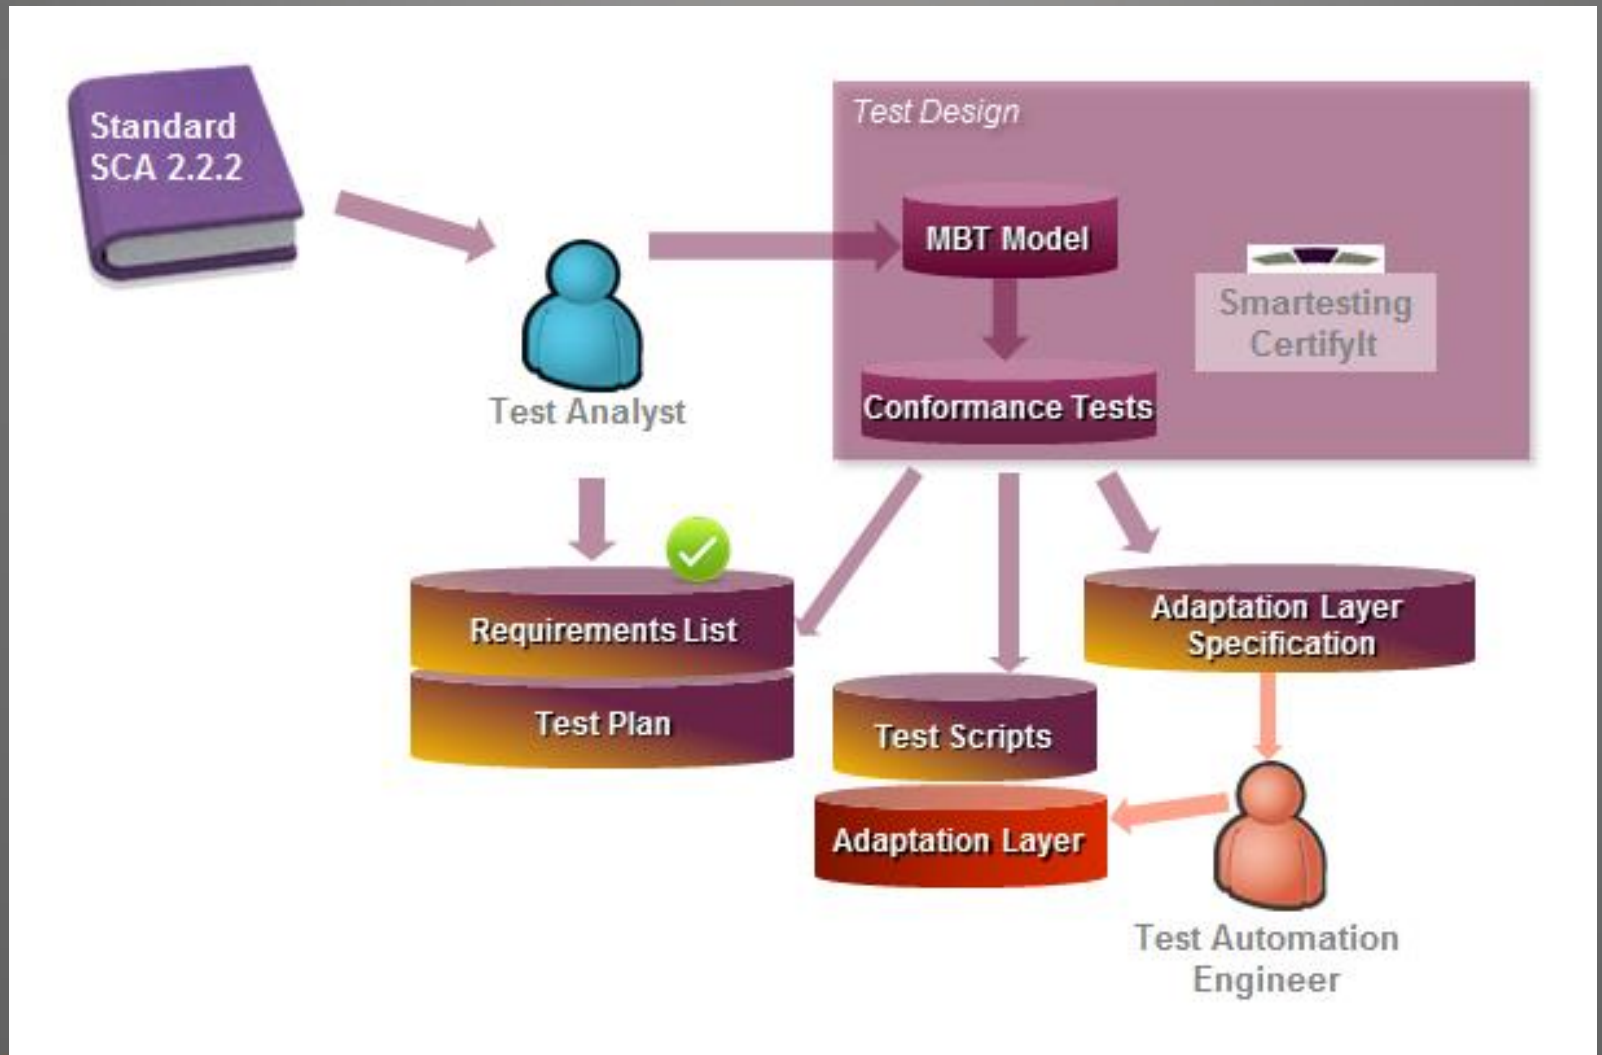

SCA conformance testing - MBT positioning

SCA Conformance Testing - MBT Process

Proof of Concept - SCA 2.2.2 scope

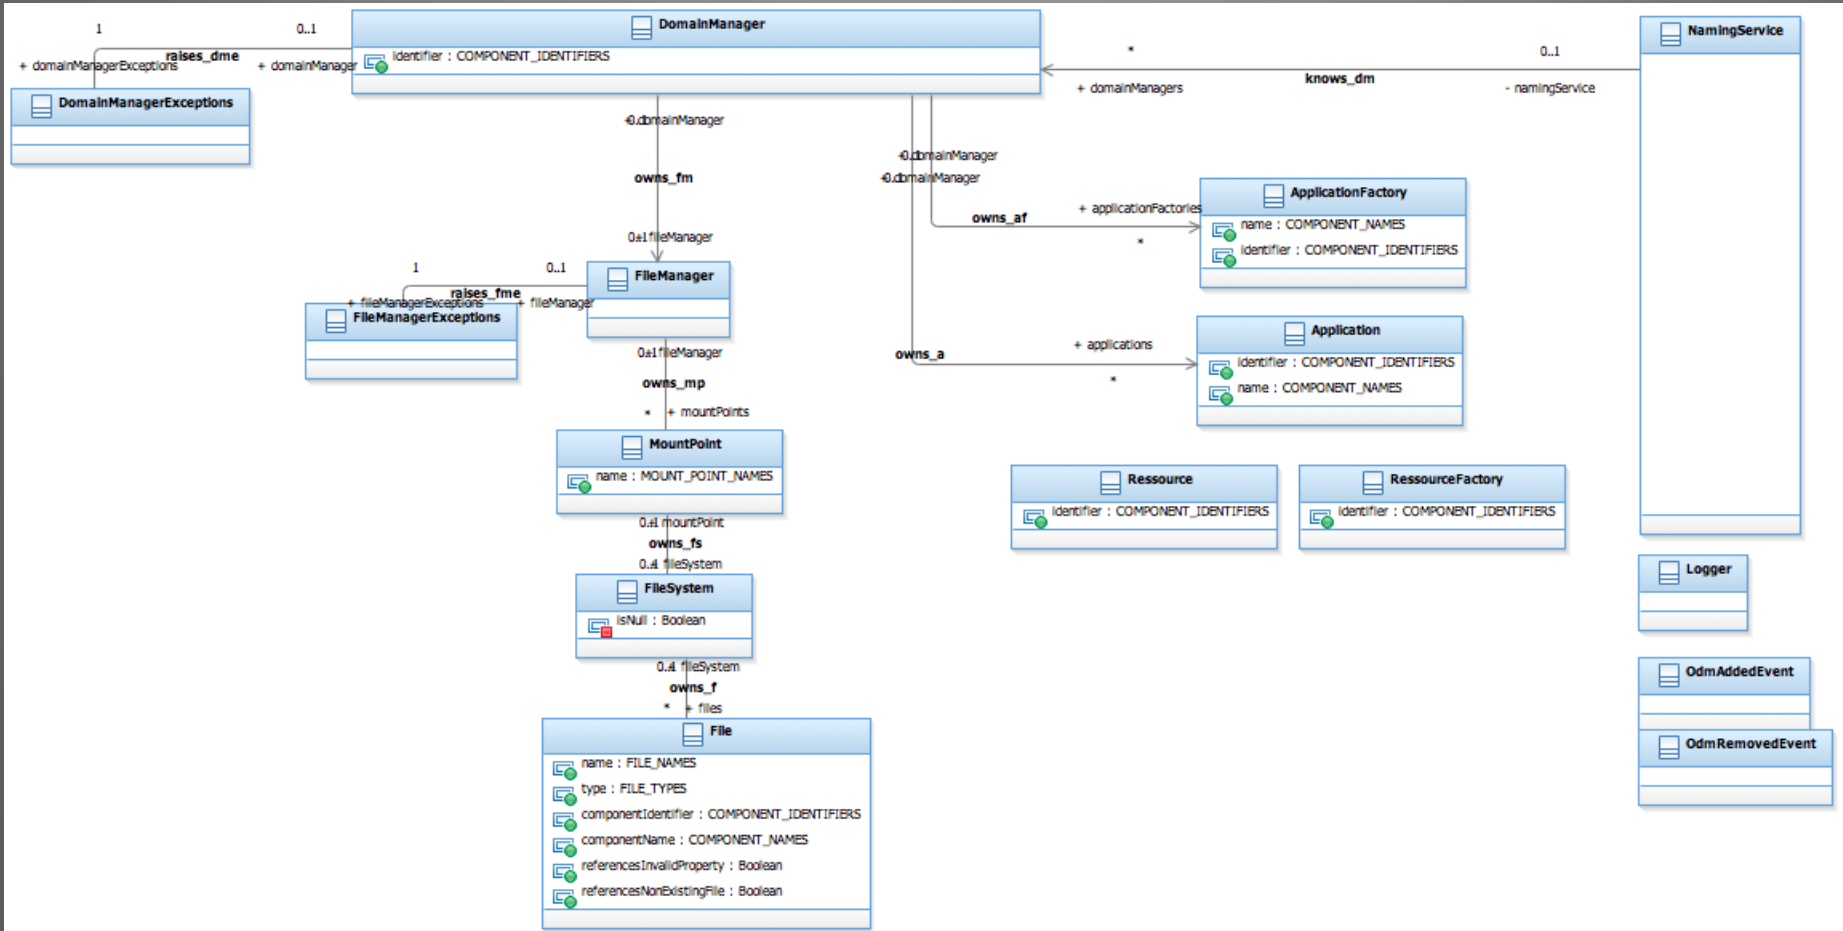

Requirement Tag	Criterion Tag	Requirement/Criterion Text	Section Number	Test Method	JTAP Test Case Name	Manual Test Case Number
SCA 2.2.2 Specification - Main Body						
AP0011		A log producer shall only output log records that contain an enabled CosLwLog::LogLevel value.	3.1.2.2.1	Manual		APP_TC_001
AP0012		Log producers shall use their component identifier attribute in the producerId field of the CosLwLog::ProducerLogRecord.	3.1.2.2.1	Manual		APP_TC_001
AP0013		Log producers and CF components that are required by this specification to write log records shall operate normally in the absence of a log service or in the case where the connections to a log are nil or an invalid reference.	3.1.2.2.1	Manual		APP_TC_001
AP0063		A component (e.g., Resource, DomainManager, etc.) that consumes events shall implement the CosEventComm PushConsumer interface.	3.1.2.3.1	Manual		APP_TC_029
AP0064		A component (e.g., Resource, Device, DomainManager, etc.) that produces events shall implement the CosEventComm PushSupplier interface and use the CosEventComm PushConsumer interface for generating the events.	3.1.2.3.1	Manual		APP_TC_029
AP0065		A producer component shall not forward or raise any exceptions when the connection to a CosEventComm PushConsumer is a nil or invalid reference.	3.1.2.3.1	Manual		APP_TC_029
AP0069		The connectPort operation shall make a connection to the component identified by its input parameters.	3.1.3.1.1.5.1.3	Automated	ConnectPort	APP_TC_015
AP0069	C002	A port may support several connections. The input connectionId is a unique identifier to be used by the disconnectPort operation when breaking a specific connection.	3.1.3.1.1.5.1.3	Manual		APP_TC_015
AP0070 ²		The connectPort operation shall raise the InvalidPort exception when the input connection parameter is an invalid connection for this port.	3.1.3.1.1.5.1.5	Automated	ConnectPort InvalidPort Exception	APP_TC_014
AP0070	C004 ²	The InvalidPort exception indicates one of the following errors has occurred in the specification of a Port association: 1. errorCode 1 means the Port component is invalid (unable to narrow object reference) or illegal object reference.	3.1.3.1.1.3.1	Automated	ConnectPort InvalidPort Exception	APP_TC_014
AP0071		The connectPort operation shall raise the OccupiedPort exception when unable to accept the connections because the port is already fully occupied.	3.1.3.1.1.5.1.5	Automated	ConnectPort Occupied Port Exception	APP_TC_015
AP0072		The disconnectPort operation shall break the connection to the component identified by the input connectionId parameter.	3.1.3.1.1.5.2.3	Automated	DisconnectPort Test	APP_TC_012
AP0073 ²		The disconnectPort operation shall raise the InvalidPort exception when the input connectionId parameter is not a known connection to the Port component.	3.1.3.1.1.5.2.5	Automated	DisconnectPort Test	APP_TC_012

Test Execution using JUnit

The screenshot displays the Eclipse IDE interface during a JUnit test execution. The top toolbar shows various icons for file operations and development tools. The Package Explorer on the left shows the project structure, with the 'JUnit' package selected. The main editor area displays the source code of the `Mount_c6_e2_16_` class, which is a JUnit 4 test case. The code includes imports for `junit.framework.TestCase` and `AdapterImplementation`, and defines methods for `setUp()`, `testMount_c6_e2_16_()`, and `tearDown()`. The bottom panel shows the 'Console' view with the output of the test execution, indicating that the test passed successfully. The status bar at the bottom indicates the current file is 'Writable' and 'Smart Insert' is enabled.

Lessons learned and Conclusion

- Model-Based Testing is adequate for SCA conformance testing
- This process targets functional behavioral SCA requirements
- The modeling notation used (UML / OCL) was suitable to model targeted SCA requirements
- The MBT tool-chain helps to automate test generation (documented test repository, traceability and executable test scripts)
 - Increased productivity for the development of the conformance test suite
 - Better control about what is really tested and how in the conformance test suite

Thank you for attention !
